

# Deep groove ball bearings

**6200-2Z J/C3 HC5 GJN**

1      2      3      4      5

## 1. Seals, shields & snap rings:

RSH	Contact seal of synthetic rubber (NBR) on one side for bearings up to 52 mm O.D.
RS1	Contact seal of synthetic rubber (NBR) on one side for bearings above 52 mm O.D.
RS2	Contact seal of synthetic rubber (FRM) on one side for high temperature capability
RSL	Low friction seal of synthetic rubber (NBR) on one side for bearings up to 52 mm O.D.
RZ	Low friction seal of synthetic rubber (NBR) on one side for bearings above 52 mm O.D.
Z	Shield on one side
2RSH	Contact seal of synthetic rubber (NBR) on both sides for bearings up to 52 mm O.D.
2RS2	Contact seal of synthetic rubber (FRM) on both sides for high temperature capability
2RSL	Low friction seal of synthetic rubber (NBR) on both sides for bearings up to 52 mm O.D.
2RZ	Low friction seal of synthetic rubber (NBR) on both sides for bearings above 52 mm O.D.
2Z	Shields on both sides
NR	Snap ring groove and snap ring on outer ring
N	Snap ring groove
ZNBR	Snap ring on opposite side of shield
JEM	C3 clearance, Pressed steel cage, electric motor quietness specification, GJN grease for "bearings with closures."

## 2. Cage designs:

J	Pressed steel cage, ball guided (not marked on bearings)
M/MA	Machined brass cage, rolling element guided
TC	Phenolic cage, inner ring guided
Y	Pressed brass cage, ball guided
TN9	Cage of glass fiber reinforced polyamide 6.6, ball guided

## 3. Clearance/tolerance:

C1	Clearance < C2
C2	Clearance < Normal
(C0)*	Normal clearance
C3	Clearance > Normal
C4	Clearance > C3
C08	ABEC5 running accuracy inner and outer
C78	Combination of C70 and C08
C70	Reduced I.R. and O.R. diameter
C782	C78 and C2 clearance
C783	C78 and C3 clearance

\* Not marked on bearing or package.

Note: C3 clearance, J-steel cages and quiet running characteristics available in JEM bearings. See page 35.

## 4. Suffix:

HC5	Ceramic ball set
VA201,	Special specifications for
VA208,	high temperature applications
VA228	

## 5. Lubrication:

GJN	High temperature, long life NLGI 2 grease with urea thickener and mineral oil (HT51 no longer available, replaced by GJN)
WT	Wide temperature range, long life NLGI 2-3 grease with urea thickener and ester oil
LHT23	Long life, quiet running NLGI 2 grease with lithium thickener and ester oil
MT47	Medium temperature, quiet running NLGI 2 grease with lithium thickener and mineral oil
MT33	Medium temperature, quiet running NLGI 3 grease with lithium thickener and mineral oil
LHT30	Dow Corning Molykote™ 44 Medium
LHT64	Shell Aeroshell #7, MIL-G-23827
W64	Solid Oil
LT10	Low temperature NLGI 2 grease with lithium thickener and diester oil

# Introduction

Technical features	
<b>Boundary dimensions</b>	In accordance with ISO 15
<b>Tolerances</b>	Normal, ABEC 1 P6 (SKF Explorer)
<b>Running accuracy</b>	Up to 52 mm O.D. – P5, ABEC 5 52 mm to 110 mm O.D. – P6, ABEC 3 >110 mm O.D. – Normal, ABEC 1
<b>Heat stabilization</b>	250° F (120° C)
<b>Misalignment</b>	2-10 minutes of arc
<b>Cage material</b>	
<b>Standard</b>	Steel
<b>Optional</b>	Machined brass (M)
<b>Axial load – max</b>	0.5 x $C_0$ for 6200, 6300 and 6400 series 0.25 x $C_0$ for 61800, 61900 and 6000 series
<b>Seals</b>	2RS1 – Synthetic rubber (NBR) seals 2RS2 – Synthetic rubber (FRM) seals
<b>Shields</b>	2Z – Stamped steel

# Introduction

## Introduction

Deep groove ball bearings are used in a particularly wide variety of applications. They are relatively simple in design, non-separable, capable of operating at high and even very high speeds, and require little attention or maintenance in service provided the customer selects the appropriate bearing specifications for his application. These characteristics coupled with a price advantage make deep groove ball bearings the most popular of all rolling bearings.

SKF produces deep groove ball bearings in a large number of designs and sizes. The most numerous are the single row bearings without filling slots (Conrad assembly). The bearings with filling slots described in the section starting on page 55 are used in special applications and consequently only a limited range is produced.

## Basic design

**Deep groove ball bearings, single row**  
SKF single row deep groove ball bearings have deep, uninterrupted raceways and a high degree of conformity between balls and raceways. This enables them to carry axial loads in both directions in addition to radial loads even at high speeds. Single row deep groove ball bearings are suitable for a wide variety of applications and are therefore produced in a large number of sizes and designs.

Single row deep groove ball bearings of the basic design, i.e. open at both sides, (**Figure 1**) are produced by SKF in several series and in a very wide range of diameters. Those bearings of the basic design which are also produced as shielded or sealed bearings may, for manufacturing reasons, have recessed outer ring shoulders to take the shields or seals.

### ABEC 5 single row bearings

SKF produces single row deep groove ball bearings in a higher precision class (ABEC 5). These products are most frequently used in high-speed applications or where precision is critical as in cutting tools, electric motors, handheld tools, and spindles. ABEC 5 bearings are produced in the 6200 and 6300 series and are available in an open version only. They can be supplied with either a brass (Y) or phenolic (TC) cage.

### Deep groove ball bearings with filling slots (Max type)

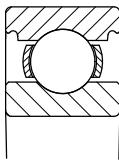

Single row deep groove ball bearings with filling slots incorporate a greater number of balls than the corresponding size without filling slot, and have a filling slot in both outer and inner rings. The radial load carrying capacity is higher than that of bearings without filling slot, but their axial load carrying capacity is small. They are also unable to operate at the high speeds normally associated with deep groove ball bearings.

SKF deep groove ball bearings with filling slots are available in various designs to meet market demands. The most common are described below (**Figure 2**) and are listed in the tables on page 55.

## SKF Explorer class bearings

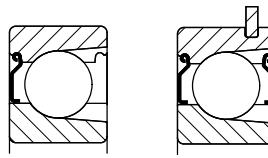

High performance SKF Explorer deep groove ball bearings are **printed in blue** in the product tables. The higher performance of SKF Explorer deep groove ball bearings also includes quieter running. SKF Explorer bearings retain the designation of the earlier standard bearings. However, each bearing and its box are marked with the name "SKF Explorer". Additional details on SKF Explorer performance class bearings can be found on page 25.

## Product highlights

### Fast, quiet, robust bearings

If the application is demanding and quiet running, smoothness, strength and low heat generation are mandatory—SKF deep groove ball bearings fit the bill.

### Quiet running

High precision balls and specially designed raceway grinding equipment are used by SKF to produce some of the quietest running bearings available.

### Quality performance in demanding applications

Capable of meeting the severest demands in terms of operating speed, operating temperature, vibration, high running accuracy, low friction, and the ability to function in a contaminated environment with available seals and shields.

### Optimized internal geometry

The internal geometry has been optimized for longer life, quieter running, improved seal attachment, low friction and increased ability to accommodate slight misalignments without reducing bearing life.

### Large product assortment

Available in a wide range (2.5 to 800 mm inside bore diameter), the basic SKF design is available with a choice of shields, seals and snap rings. In addition, SKF produces max-type deep groove ball bearings with a filling slot.

### JEM bearings

In the USA, SKF offers bearings with C3 internal clearance, steel cages and quiet running characteristics packaged as JEM bearings.

### JEM packaging

The box will be marked "JEM" while the bearing is marked C3 and/or GJN pending if the bearing is open or capped.

### GJN grease provided as standard in JEM bearings

SKF provides GJN, a high temperature urea based grease, as the standard for all JEM deep groove ball bearings. GJN is accepted by major OEM electric motor manufacturers in the U.S. and offers a wide range of operating temperature and is quiet running.

# Introduction

## Variations

### Bearings with shields

Bearings with shields, designation suffix Z or 2Z, are produced in one of two designs, depending on the bearing series and size (**Figure 3**). The shields are made of sheet steel and normally have a cylindrical extension in the shield bore to form a long sealing gap with the inner ring shoulder.

Shielded bearings are primarily intended for applications where the inner ring rotates. If the outer ring rotates, there is a risk that the grease will leak from the bearing at high speeds.

### Bearings with low friction seals

SKF deep groove ball bearings with low-friction seals, designation suffixes RSL, 2RSL or RZ, 2RZ are manufactured in two designs depending on bearing series and size (**Figure 4**).

- Bearings in the 60, 62 and 63 series up to 52 mm outside diameter are equipped with RSL seals to design **(a)**.
- Other bearings have RZ seals **(b)**.

The seals form an extremely narrow gap with the cylindrical surface of the inner ring shoulder or recess profile and are practically non-contracting. Because of this, bearings fitted with low-friction seals can be operated at the same high speeds as bearings with Z shields, but with improved seal performance.

The low-friction seals are made of oil and wear-resistant acrylonitrile butadiene rubber (NBR) with a sheet steel reinforcement. The permissible operating temperature range for these seals is -40° to +212° F (-40° to +100° C) and up to +250° F (+120° C) for brief periods.

### Bearings with contact seals

Bearings with contact seals, designation suffixes RSH, 2RSH or RS1, 2RS1 are manufactured in three designs depending on bearing series and size (**Figure 5**).

- Bearings in the 60, 62 and 63 series up to 52 mm outside diameter are equipped with RSH seals to design **(a)**.
- Other bearings have RS1 seals, which seal against the cylindrical surface of the inner ring shoulder **(b)** indicated by dimension d1 in the product table or against a recess in the inner ring side face **(c)** indicated by dimension d2 in the product table.

The seals are inserted in recesses in the outer ring and provide good sealing at this position without deforming the outer ring. Standard seals are made of acrylonitrile butadiene rubber (NBR) with a sheet steel reinforcement. The permissible operating temperature range for these seals is -40° to 212° F (-40° to +100° C) and up to +250° F (+120° C) for brief periods.

When sealed bearings are operated under extreme conditions, e.g. very high speeds or high temperatures, grease leakage may occur at the inner ring. For bearing arrangements where this would be detrimental, special design steps must be undertaken, please consult the SKF application engineering service.

### Bearings with snap ring groove

Deep groove ball bearings with a snap ring groove can simplify arrangement design as the bearings can be axially located in the housing by a snap (or retaining) ring (**Figure 6**). This saves space. Appropriate snap rings are shown in the product table with designation and dimensions and may be supplied separately or already mounted on the bearing.

### Warning!

#### Safety precautions for fluoro rubber

*Fluoro rubber is very stable and harmless in normal operating conditions up to +392° F (+200° C). However, if exposed to extreme temperatures above +572° F (+300° C), e.g. fire or the flame of a cutting torch, fluoro rubber seals give off hazardous fumes. These fumes can be harmful if inhaled, as well as to the eyes. In addition, once the seals have been heated to such temperatures, they are dangerous to handle even after they have cooled and should not touch the skin. If it is necessary to handle bearings with seals that have been subjected to high temperatures, such as when dismounting the bearing, the following safety precautions should be observed:*

- Always wear protective goggles, gloves and appropriate breathing apparatus,
- Place the remains of the seals in an airtight plastic container marked with a symbol for "material will etch",
- Follow the safety precautions in the appropriate material safety data sheet (MSDS).

*If there is unintentional contact with the seals, wash hands with soap and plenty of water and flush eyes with plenty of water and consult a doctor immediately. If the fumes have been inhaled, consult a doctor immediately.*

*The user is responsible for the correct use of the product during its service life and its proper disposal. SKF takes no responsibility for the improper handling of fluoro rubber seals or for any injury resulting from their use.*

# Introduction

## Lubrication

Bearings with shields or seals at both sides are supplied as standard filled with a grease which has good rust inhibiting properties and which is suitable for operating temperatures between -22° and +230° F (-30° to +110° C). The bearings are lubricated for life and are maintenance free. **They should on no account be heated to temperatures above 250° F (120° C), nor should they be washed.** By special order, bearings with shields or seals can be supplied with other greases, e.g. for a temperature range of -40° to +300° F (-40° to +150° C).

The quantity of grease supplied is appropriate to the size of the bearing and normally fills between 25 and 35% of the free space in the bearing. Open

bearings are supplied with a rust preservative that is compatible with most standard greases and should not be removed prior to mounting or lubricating.

## Masses

The masses given in the tables are for the basic design of the bearing. The mass of bearings with shield(s), seal(s) or snap ring groove differs only slightly from that of the basic bearing.

## Internal clearance

### Radial internal clearance (Table 1)

SKF single row deep groove ball bearings are produced with Normal radial internal clearance (CN

or CO not marked on bearing) as standard. Radial clearance selection is based on factors such as high speed, operating temperature, shaft fits and axial movement limitations. The availability of bearings with clearances other than Normal should be checked before ordering. The suffix JEM indicates an internal clearance greater than Normal (C3). Many of the bearings, particularly the smaller sizes, are also available with radial internal clearance, which is greater than (C3) or less than (C2) Normal.

The values of the clearance limits for single row deep groove ball bearings are shown in **Table 1** and the values of the clearance limits for max type ball bearings are shown in **Table 3** on page 38. Both conform to ISO 5753-1991 (ABMA standard 20-1996) for the size range covered by this standard. The values apply to unmounted bearings under zero measuring load.

# Introduction

## Loads

### Equivalent dynamic bearing load for single bearings, Conrad type

$$P = F_r \text{ when } F_a / F_r \leq e$$

$$P = X F_r + Y F_a \text{ when } F_a / F_r > e$$

where

P = equivalent dynamic bearing load

F<sub>r</sub> = radial load acting on the bearing

F<sub>a</sub> = axial load acting on the bearing

X, Y and e = factors from **Table 2**

The X and Y factors required for the calculation of the equivalent bearing load of deep groove ball bearings are dependent on the ratio of the axial load F<sub>a</sub> to the basic static load rating C<sub>0</sub>. They are also influenced by the magnitude of the radial internal clearance; increased clearance enables heavier axial loads to be carried.

If the bearings are mounted with the usual fits (tolerance j5 to n6 depending on shaft diameter, and J7 for the housing) the values of e, X and Y given in **Table 2** can be used to calculate the equivalent load. If a clearance greater than Normal is chosen because a reduction in clearance will be obtained in operation, for example, as a result of strong heating of the inner ring, then the values of the factors under Normal clearance should be used.

### Equivalent dynamic bearing load for single row deep groove ball bearings with filling slots

$$P = F_r + F_a$$

provided  $F_a / F_r \leq 0.6$

Bearings with filling slots are unsuitable for axial loads F<sub>a</sub> greater than 0.6 F<sub>r</sub> and deep groove ball bearings without filling slot should be used instead.

## Minimum load

In order to provide satisfactory operation of all ball and roller bearings they must always be subjected to a given minimum load.

This is also true of deep groove ball bearings, particularly if they run at high speeds where the inertia forces of the balls and cage, and the friction in the lubricant can have a detrimental influence on the rolling conditions in the bearing and may cause damaging sliding movements to occur between the balls and the raceways.

The requisite minimum radial load to be applied in such cases can be determined by using the Interactive Engineering Catalog on the SKF website [www.skf.com](http://www.skf.com) or by contacting SKF Applications Engineering.

However, the weight of the components supported by the bearing, together with the external forces, often exceeds the requisite minimum load. If this is not the case, an additional radial load must be applied to the bearing; for example, by increasing belt tension, by applying a preload to the inner or outer rings, or by using springs.

## Frequency vibration data

Frequency vibration data is available on the SKF website [www.skf.com](http://www.skf.com) under Knowledge Centre/Engineering tools and CAD, or by contacting SKF Applications Engineering.

## Special solutions using deep groove ball bearings

- Bearings with inch boundary dimensions
- High temperature (kiln truck) bearings for extreme temperatures
- Stainless steel bearings for water/moist environments
- INSOCOAT for electrically insulating a bearing from stray current
- Bearings with ceramic balls for extreme speed or electrical insulation
- Double row deep groove (4200 series) for increased load

**Details on these special solution products are available in other SKF publications, which can be supplied upon request.**
