# The efficiency you deserve

## > Acti 9

The complete high performance  
modular system for final distribution

**Schneider**  
Electric

# 5 generations

of industry experience and 21 new patents  
make Acti 9 the new reference in low voltage  
modular systems.

# > Acti 9

'In short, I optimize my own energy.'

## The new core modular system that makes your power distribution installation safer, simpler, and more efficient

> High-quality modular system without compromise

We leveraged five generations of low voltage expertise to design a precise, high-quality modular system without compromise. The Acti 9 offers the fastest and most flexible installation experience, and completely eliminates safety concerns during maintenance and operation. Engineered to adapt to the most challenging networks and environments while remaining cost-effective over time, it is the most flexible, coordinated, comprehensive, and innovative range of low voltage modular systems available.

+ The Acti 9 gives you safety, simplicity, and efficiency for the life span of your installation.

★ Acti 9: The 5th generation of modular systems

# Acti 9

The safest, simplest, and most efficient system for power distribution solutions

## Protection Systems

- Miniature circuit breaker
- Integrated control circuit breaker
- Residual current circuit breaker
- Vigi module
- Surge arrester
- Automatic recloser auxiliary
- Remote control auxiliary
- Electrical auxiliaries

## Safer

VisiSafe and Classes give complete safety for the life of your installation

## More Efficient

VisiTrip, Super immunization, and automatic reclosers increase continuity of service and enhance reliability

## Control Systems

Contactors  
Impulse relays  
Indicator lights  
Push buttons  
Selector switches

## Installation Systems

IP OB terminals  
Splitter block  
Full range of mounting  
and wiring accessories

## Simpler and Smarter

Two certifications for one product, 100 MCB and RCD coordination, and easy ordering design

Fully BMS compatible, up to 50 less wiring, control mode flexibility adapts to changes, and 100 recyclable

# Safe

Safest operation guaranteed even in the most demanding environments

100%

safe for installers and users in the most severe environments

The best choice for industrial and tertiary buildings

## Designed for safety, even in the most demanding environments

Safety matters most, and the Acti 9 system gives you, your customers, and their installations the highest level of protection available. It guarantees 100 percent safe operation and maintenance for you and your customers; its international certifications and numerous protection innovations mean the Acti 9 system exceeds even the most demanding requirements to give you total safety during maintenance, for the lifetime of your installation.

## Comprehensive certification

### Delivers complete industry-approved protection

The Acti 9 is fully tested, approved, and certified by national and international third parties. It guarantees that your installation is safe and compliant with all relevant safety standards, and demonstrates to your customers that you use industry-approved materials and best practices.

'I have no worries about the safety of the electrical installation, the buildings, and everyone inside'.

## Guarantees total safety during maintenance

VisiSafe

### VisiSafe

VisiSafe guarantees the downstream circuit is always safe, regardless of overvoltage conditions, wear, or operator experience, even in the most demanding environments.

The green strip indicates the safe position of contacts.

Unique safety features:

- Highest Impulse voltage withstand:  $U_{imp} = 6 \text{ kV}$ 
  - Guarantees longer equipment service life despite overvoltage conditions.
- Highest pollution resistance among modular devices: Pollution degree level 3
  - A true "all-terrain" product ideally suited for all environments.
- Leading edge insulation voltage: 500 V
  - Complete safety for operators maneuvering the operating handle.

Available only from Schneider Electric

## Promises absolute protection against electric shocks

Available only from Schneider Electric

### Class 2 Front Face

The Acti 9 is the only device available with this level of safety. Clearances between breaker surfaces and internal parts are over double the industry standard. It guarantees risk-free handling during the life of the installation, regardless of environment or operator experience.

## Protects the load and guarantees long service life

### Fast Closing Mechanism

Fast closure of all Acti 9 MCBs and RCCBs limits wear and reduces voltage drops, helping to prevent premature equipment aging and overheating.

### Integrated Padlocking

Available for Acti 9 remote control devices, the rugged, integrated padlock allows complete lockdown for guaranteed protection and safety. It prevents toggle device movement and inadvertent or unauthorized access, so you can ensure employee or contractor safety at all times.

## Ensures error-free linkages

**Note:** this QuickVigi section must be locally adapted in compliance with the local offer

### QuickVigi

Fast, safe and screwless 'on-click' connections between MCB and add-on RCD modules. One click is all it takes. Complete operator safety is guaranteed.

# Efficient

The system that streamlines your operations workflow

## Designed to minimize downtime and avoid nuisance trips

With features like VisiTrip, which greatly reduces diagnostic and repair time, and super immunization of the RCDs to guarantee the highest continuity of service available, the Acti 9 system allows easier building management, eliminates downtime, and makes your business even more competitive, limiting intervention costs on distant infrastructure sites.

## Less downtime, more continuity of service

VisiTrip

Available only from  
Schneider Electric

**VisiTrip minimizes downtime and reduces repair times**  
Identify faults in one glance, and easily see the operating status of your network. VisiTrip indicates only the faulty outgoing, allowing fast diagnosis, resolution, and re-closing loads for easier building management and reduced downtime.

'When I install the Acti 9 I know I don't have to come back to the job'.

**100%**

preventative maintenance

**0**

downtime

### Prevents unnecessary trips

Available only from Schneider Electric

**Super immunization (SI) of the RCDs** guarantees the highest continuity of service and electrical immunity, especially where switchgear contends with electromagnetic or chemical interference. It also meets the high continuity of service requirements in all critical power applications (hospitals, data centres, telecoms, and tunnels).

### Enhances service reliability

Acti 9 devices provide maximum continuity of service. Extended discrimination ranges allow for a variety of solutions for continuity of service, restricting downtime to only the affected circuit and leaving the rest of your installation intact.

### No need for on-site intervention

The Acti 9 introduces a new automatic recloser auxiliary (ARA iC60) designed to limit the cost of intervention on far away infrastructure sites. No need to have permanent on-site teams responding to transient faults, limiting distant site intervention costs.

# Simple and Smart |

## The right solution for every application

The Acti 9 simplifies final distribution operations in buildings and industrial facilities, giving you the right solution with the right technical characteristics, for every application. As new installation standards emerge or building requirements are modified, the Acti 9 system can easily scale to meet your needs. It's a flexible, open system with all-in-one, integrated components that can communicate with any building management system.

# Designed to be simple to choose, easy to design, and straightforward to install

## Easy to design and choose

The Acti 9 complies with IEC EN 947 (industrial) and IEC EN 898 (tertiary) standards @two certifications in one product @making it perfect for commercial and industrial applications.

## Guarantees 100 coordination

100 percent coordination between RCDs and MCBs means no more searching through technical guides or coordination tables. Plus, in the Reflex iC60 the MCB and internal actuator are a unique all-in-one concept fully covered by the manufacturer warranty.

## Supports intuitive ordering and design

Meaningful part numbers mean no mistakes and no doubts when ordering or designing. Get the product type, poles and rating in one glance.

**A9XXX 225 2P, 25A**

## Conforms to any BMS

Reflex iC60 has integrated signal auxiliaries for complete simplicity. Its control mode flexibility easily adapts to changes in your installation, optimizing design time for lighting and building control.

# 30%

of switchboards are modified at design, cabling, or commissioning stages, increasing project start-up times.

## Offers a new, economic MCB and RCCB range

The Acti 9 is optimized for simple applications. Its economic MCB and RCCB ranges are perfect for basic applications in tertiary and industrial operations.

- MCB: i 60N complies with IEC898 (single breaking capacity Icn=6000A)
- RCCB: iD 60 complies with IEC61008 (30mA and 300mA AC sensitivity)

These ranges do not include VisiSafe, VisiTrip, auxiliaries or accessories (except padlocking feature).

**Note:** this iC60 section must be locally adapted in compliance with the local offer

## Reflex iC60: the all-in-one concept integrated control circuit breaker of the Acti 9 system

The Reflex iC60 combines an MCB with an internal actuator. Designed to evolve and adapt with the dynamic requirements of tertiary and industrial lighting control applications, it easily communicates with PLCs and BMS systems without the need for add-ons, retrofits, or extras. Everything you need is included.

Available only from Schneider Electric

# Simple and Smart

## Easy to install

Up to 50% less wiring

Reflex iC60 all-in-one concept means up to 50% less wiring for reduced cabling and more efficient verification and connection.

Lighting control solution without (left) with (right) Reflex iC60 "all in one concept"

## Allows heavy-duty, reliable tightening

Twice the terminal tightening torque for more robust connections.

## Safe and secure connections

Provides secure connections with quick, ergonomic and safe IP20B terminals shutters.

'Everything is simpler with Acti 9. Whatever the application, I have no second thoughts'.

## Easy to operate

Provides greater readability

Ergonomic interface with specific colour coding for locking padlocking devices. N indicator for easy readability and speed of servicing.

Allows quick intervention

Large area for circuit identification allows quick intervention and leaves no doubt about referenced circuits. Acti 9 label maker gives your installation a professional appearance.

Comes with tailored accessories

The Acti 9 system includes a comprehensive list of accessories: easily-installed padlock system, splitter block, rotary handle mount for switchboard doors, screw shields, sealable terminal shields, plug-in base, interpole barrier, and clip-on markers.

## Easy to upgrade

Adapts to your installation

Double DIN rail locker allows circuit changeouts without removing the comb. It adapts to new requirements and simplifies switchboard evolution.

Evolves with changing site requirements

Multiclip distribution system allows you to quickly add outgoing and balance phases. Multiclip offers screwless, safe connections.

**100%**

coordination between MCB and actuator

**15%**

time saved on design and installation

# Attractive and environmentally friendly

## Advanced ergonomics and attention to all detail

The Acti 9 is designed to be noticed. We incorporated clean lines with distinctive, gently rounded shapes to give the Acti 9 its faultless appearance. It immediately suggests well-designed and user-friendly aesthetics and particular attention to detail. Clarity of identified circuits and elegant appearance will have your customers impressed with their outstanding installations.

Acti 9 lets you touch and feel the difference.

## High quality, subtle, and precise

Holding the Acti 9 in your hand, you can feel the high quality. Contacts close quickly and precisely, with no hint of dubious noise. The solid fit of its components and its smooth surfaces mean you can feel the difference even before you use it.

“You can tell it’s a high Quality product when you hold it in your hands’.

### A better use of energy, from start to finish

The Acti 9 helps you meet developing energy efficiency and environmental certifications or requirements, now and in the future. It minimizes impact from the design stage, through the installation's lifetime of use, and eventual recycling. Through both design and technology, the Acti 9 provides you with the key combination of less impact and more efficiency that is necessary for the environment today.

**100%**

recyclable and recoverable materials, RoHS compliant, and REACH

**The Acti 9 is your safe, efficient, and simple choice for low voltage modular systems.**

**20%**

savings in energy losses

IEC/EN 60947-2  
IEC/EN 60898-1 up to 40 A

- iC60L circuit breakers are multi-standard circuit breakers which combine the following functions:
  - circuit protection against short-circuit currents,
  - circuit protection against overload currents,
  - suitable for industrial isolation according to IEC/EN 60947-2, standard.
  - fault tripping indication by a red mechanical indicator in circuit breaker front face.

# iC60L circuit breakers (curve B, C, K) (cont.)

PS 104436-40

- Increased product service life thanks to:
  - overvoltage resistance by high level of industrial performances conception (pollution degree, rated impulse withstand voltage and insulation voltage),
  - high performance limitation (see limitation curves),
  - fast closing independent of the speed of actuation of the toggle.
- Remote indication, open/closed/tripped, by optional auxiliary contacts.
- Top or bottom electrical feeding.

Clip on DIN rail 35 mm.

Indifferent position of installation.

Details of minimum distance between circuit-breaker and earthed metal parts for circuit-breaker intended for use without enclosure.

### Technical data

- Tripping curves: C curve - Overcurrent protection for any type of application.
- Positive break indication - the green strip indicates that all the poles are open and allows work to be carried out on the downstream circuit in complete safety.
- Suitable for isolation as defined in IEC / EN 60947-2.
- Increase in the service life of the product: thanks to fast closure independent of the speed of action on the handle.
- Current limitation in the event of a fault: fast opening of the contacts prevents the loads from being destroyed in the event of a short-circuit.

Main characteristics	
Rated service breaking capacity (Ics)	75 % of the ultimate breaking capacity (Icu)
Power loss	See module 92517
Magnetic tripping (Ii)	8.5 In (± 20 %) (compatible with curve C)
Rated impulse withstand voltage (Uimp) under frame	6 kV
Insulation voltage (Ui)	500 V DC
Endurance (O-C)	
Electrical	3,000 cycles (where L/R=2 ms) 6,000 cycles where the circuit is resistive
Mechanical	20,000 cycles
Additional characteristics	
Pollution degree	3
Utilization category	A (no delay in accordance with IEC/EN 60947-2 standards)
Tropicalization (IEC 60068-2 and GB 14048.2)	Relative humidity: 95 % at 55°C / 131°F
Operating temperature	-25°C to 70°C / -13°F to 158°F
Storage temperature	-40°C to 85°C / -40°F to 185°F

**Failure to match polarity during connection may lead to a fire hazard and/or serious injury.**

- The connection polarity must be observed (marked on the front panel).
- Use only with direct current.
- If two poles are used in series for the American network, use at least a 12 inch / 30 cm cable.

Type	Earthed		Isolated from earth
Source	Earthed polarity + or -	Earthed central point	Isolated polarities
Protected polarities	1 (1P isolation)	2	2
Diagrams (and type of faults)	<p>DB116851</p> <p>Example : negative polarity to the earth</p>	<p>DB116852</p>	<p>DB116853</p>

Selection of supplementary protector and pole connection			
24 V ≤ Un ≤ 250 V	Single-pole	Two-pole	Two-pole
Upstream connection	Only if L+ polarity is earthed	<p>DB116735</p>	<p>DB116735</p>
Downstream connection	<p>DB116752</p>	<p>DB116738</p>	<p>DB116738</p>
250 V < Un ≤ 500 V	Two-pole	Two-pole	Two-pole
Upstream connection	<p>DB116736</p>	<p>DB116735</p>	<p>DB116735</p>
Downstream connection	<p>DB116737</p>	<p>DB116738</p>	<p>DB116738</p>

Fault analysis (low earth connection resistance)			
Fault A	<p><b>b</b> I<sub>sc</sub> maximum at U</p> <p><b>b</b> Only protected polarity concerned</p> <p><b>b</b> All the poles of the protected polarity must have a breaking capacity ≥ I<sub>sc</sub> max. at U</p>	<p><b>b</b> I<sub>sc</sub> maximum at U/2</p> <p><b>b</b> Only positive polarity concerned</p> <p><b>b</b> All the positive polarity poles must have a breaking capacity ≥ I<sub>sc</sub> max. at U/2</p>	<p><b>b</b> Not relevant</p> <p><b>b</b> The fault must be indicated by a permanent insulation monitor (PIM) and cleared (IEC/EN 60364)</p>
Fault B	<p><b>b</b> I<sub>sc</sub> maximum at U</p> <p><b>b</b> If one polarity (in this case positive) is protected: all the poles of this polarity must have a breaking capacity ≥ I<sub>sc</sub> max. at U</p> <p><b>b</b> If two polarities are protected, to ensure isolation: all the protections of the two polarities must have a breaking capacity ≥ I<sub>sc</sub> max. at U</p>	<p><b>b</b> I<sub>sc</sub> maximum at U</p> <p><b>b</b> The 2 polarities are concerned</p> <p><b>b</b> All the poles of the two polarities must have a breaking capacity ≥ I<sub>sc</sub> max. at U</p>	<p><b>b</b> I<sub>sc</sub> maximum at U</p> <p><b>b</b> The 2 polarities are concerned</p> <p><b>b</b> All the poles of the two polarities must have a breaking capacity ≥ I<sub>sc</sub> max. at U</p>
Fault C		<p><b>b</b> As for fault A</p> <p><b>b</b> All the negative polarity poles must have a breaking capacity ≥ I<sub>sc</sub> max. at U/2</p>	<p><b>b</b> As for fault A with the same requirements</p>

### Curves

#### Tripping curves

**C curve as in standard IEC 60947.2**

- The operating range of the magnetic release is as follows between 7 I<sub>n</sub> and 10 I<sub>n</sub>.
- The curves show the cold thermal tripping limits when poles are charged and the electromagnetic tripping limits with 2 charged poles.
- The curves are used without any derating.

#### Short circuit current limiting

220 V with 1P, 440 V with 2P

250 V with 1P, 500 V with 2P

### Curves (cont.)

#### Thermal stress limitation curve

220 V with 1P, 440 V with 2P

250 V with 1P, 500 V with 2P

#### Temperature derating (according to UL 1077/ CSA22.2/ UL489A/ UL489/ IEC 60947-2 standards)

The maximum permissible current in a device depends on the ambient temperature in which it is placed. Ambient temperature is the temperature inside the enclosure or switchboard in which the devices have been installed.

The reference temperature is in the coloured column.

When several simultaneously operating devices are mounted side by side in a small enclosure, the temperature rise inside the enclosure causes a reduction in the current rating. A reduction coefficient of the order of 0.8 must therefore be allocated to the rating (already derated if it depends on the ambient temperature).

Temperature (°C)	-30	-25	-20	-15	-10	-5	0	5	10	15	20	25	30	35	40	45	50	55	60	65	70

## IEC/EN 60898-1, CEI 60947-2

C120N circuit breakers are multistandard circuit breakers that combine the following functions:

- Circuit protection against short-circuit currents,
- Circuit protection against overload currents,
- Suitability for isolation in the industrial sector to IEC/EN 60947-2,
- Fault tripping and indication by adding auxiliaries.

### Positive contact indication

- Suitability for isolation in the industrial sector to IEC/EN 60947-2.
- The presence of the green strip guarantees that the contacts open physically and allows work to be carried out safely on the downstream circuit.

- Longer product service life thanks to:
  - good overvoltage withstand capacity: products designed to offer a high industrial performance level (degree of pollution, rated impulse withstand voltage and insulation voltage).
  - high limitation performances (see limitation curves).
  - fast closure independent of toggle operating speed.
- Remote indication of the open/closed/tripped state by auxiliary contacts (optional).
- Power supply from above or below.

- Cable strength:
  - ribbed cage
  - terminal depth
  - tightening by Allen hex key (NG125 ≥ 80 A)

- Voltage taps:
  - auxiliaries power supply
  - measurement
  - emergency stop
  - remote reporting

- Integrated padlocking device

- Test button to check satisfactory operation of the tripping mechanism

- Pull-out strength:
  - metallic lock

- Impact and vibration resistance:
  - high-strength enclosure
  - IK 05

- Circuit breaker tripped indicator

- Central manual control, 3 positions:
  - ON
  - tripped on fault
  - open

DB123483

- Positive contact indication:
  - suitability for isolation in the industrial sector to IEC/EN 60947-3;
  - the presence of the green strip guarantees that the contacts open physically and allows work to be carried out safely on the downstream circuit.

- Longer product service life due to:
  - good overvoltage withstand capacity;
  - high limitation performances;
  - fast closure independent of the speed of actuation of the toggle.

STI	Cartridges
IEC EN 60947-3	NF C 60-200, NF C 63-210 and IEC 60269-1/2

- The STI isolatable fuse-carriers provide overload and short-circuit protection.
  - They are used for industrial applications requiring a high breaking capacity.
  - They perform the isolation function and must not be used as switches.
  - They can be equipped with an indicator light indicating blowing of the fuse cartridge.
  - Isolation of all poles is guaranteed for the 2P, 3P, and 3P+N versions during factory assembly.
- The general purpose fuse (gG fuse) provides overload and short-circuit protection. The fuse for motor application (**aM fuse**) only provides short-circuit protection. It is used for protection of loads with a high peak current (motors, transformer primaries, etc.).

### Accessories

#### Comb busbar

- Used to quickly bridge several STI of the same kind.

#### Busbar connectors

- Used to supply the busbar.
- For 25 mm<sup>2</sup> cable.

#### 230 V neon indicator light

- Indicates fuse blowing (off in normal operation and lit red after fuse blowing).
- 400 V maxi.

#### Padlocking device

- Locks the toggle in the "open" or "closed" position. Used with an 8 mm max. diameter padlock (not supplied).

#### Clip-on markers (C60 type)

- Used to identify:
  - either on the front face of the device
  - or on the downstream terminals.

10.3 x 38 mm	10.3	38	10.5

## Choice of sensitivity

The sensitivity of an earth leakage protection device depends mainly on the function it has to perform:

- Protection from electric shock by direct contact.
- Protection from electric shock by indirect contact.
- Protection from fire due to current leakage.

The following table gives a reminder of:

- The circuits that must be protected against these various risks (obligation or recommendation).
- The type of earth leakage protection device to be used in each case, its sensitivity, and its location in the distribution diagram.

Type of protection	Obligations		Recommended by Schneider Electric	Sensitivity (I $\Delta$ n)		
	National standard <i>To be filled in according to the country standard</i>	International standard IEC 60364		30 mA (*)	100 mA to 3000 mA (depending on the earthing system)	300 mA (or 500 mA)
<b>Protection from electric shock by direct contact</b> 	<i>To be filled in according to the country standard</i>	Power supply for <ul style="list-style-type: none"> <li>■ General-purpose power sockets, up to 20 A</li> <li>■ Appliances in the vicinity of a bathtub, shower, pond or swimming pool</li> <li>■ Portable appliances for outdoor use, up to 32 A</li> <li>■ Lighting for exhibition stands and shows</li> <li>■ Outdoor lighting</li> </ul> <i>To be modified according to national obligations (above)</i>	<ul style="list-style-type: none"> <li>■ Lighting in the home</li> </ul>	<b>Setup in final distribution switchboard</b> <ul style="list-style-type: none"> <li>■ Residual current device protecting a circuit</li> <li>■ Residual current circuit breaker protecting a group of circuits</li> </ul>		
<b>Protection from electric shock by indirect contact</b> 	<i>To be filled in according to the country standard</i>	The entire power distribution system, except for devices: <ul style="list-style-type: none"> <li>■ With class II insulation</li> <li>■ Operating at Safety Extra Low Voltage (class III)</li> </ul> <i>To be modified according to national obligations (above)</i>	–	<b>Setup in final distribution switchboard</b> <ul style="list-style-type: none"> <li>■ Residual current circuit breaker or device, on incoming feeder</li> </ul> <b>Setup in subdistribution board or main switchboard</b> <ul style="list-style-type: none"> <li>■ Residual current device protecting a circuit</li> <li>■ Residual current device or circuit breaker protecting a group of circuits</li> <li>■ On incoming feeder: residual current circuit breaker or device</li> </ul>		
<b>Protection from fire due to current leakage</b> 	<i>To be filled in according to the country standard</i>	<ul style="list-style-type: none"> <li>■ High-risk premises:                             <ul style="list-style-type: none"> <li>□ explosion (BE3)</li> <li>□ fire (BE2)</li> </ul> </li> <li>■ Agricultural and horticultural buildings</li> <li>■ Equipment for fairs, exhibitions and shows</li> <li>■ Temporary outdoor recreational installations</li> </ul> <i>To be modified according to national obligations (above)</i>	<ul style="list-style-type: none"> <li>■ Dilapidated buildings or electrical installations</li> <li>■ Humid atmospheres: agricultural buildings, public swimming pools</li> <li>■ Presence of chemical agents</li> </ul>		<b>Setup in final distribution switchboard</b> <ul style="list-style-type: none"> <li>■ Residual current circuit breaker or device, on incoming feeder</li> </ul> <b>Setup in subdistribution board or main switchboard</b> <ul style="list-style-type: none"> <li>■ Residual current device protecting each circuit to a high-risk zone</li> <li>■ Residual current device or circuit breaker protecting a group of circuits</li> <li>■ On incoming feeder: residual current circuit breaker or device</li> </ul>	

(\*) The 10 mA sensitivity is useful for certain very specific applications, where there is a risk that someone could sustain a non-dangerous current (10 to 30 mA) without being able to get free. Example: healthcare equipment for hospital beds. Generally, devices with this very high sensitivity are liable to cause frequent tripping, due to the natural leakage currents of the installation.

## Interference immunity

Schneider Electric provides various equipment technologies capable of overcoming the consequences of interference of all kinds.

Operating conditions		Examples	Types				
			AC	A	A si	B	
<b>Loads</b>							
 DB123165	With no special characteristics	<ul style="list-style-type: none"> <li>General-purpose power sockets</li> <li>Incandescent lighting</li> <li>Household appliances: microwave oven, dishwasher, clothes dryer</li> <li>Electric heating, water heater</li> </ul>	■	■	■	■

## Discrimination

Residual current devices of average sensitivity (100 mA and more) are available in a selective (S) and delayed (R) version. This option ensures that, in the event of an earth fault downstream of the installation, only the defective part is switched off. The table below shows (in green) which upstream/downstream equipment combinations provide this discrimination.

Sensitivity (mA) - Downstream		Sensitivity (mA) - Upstream													
		Instantaneous						Selective S			Delayed R				
		30	100	300	500	1000	3000	100	300	500	1000	3000	1000	3000

- Combined with iC60 circuit breaker, the Vigi iC60 provide:
  - protection of persons against electric shock by direct contact ( $\leq 30$  mA),
  - protection of persons against electric shock by indirect contact ( $\geq 100$  mA),
  - protection of installations against the risk of fire (300 mA or 500 mA).

IEC/EN 61009-1

- Combined with iC60 circuit breaker, the Vigi iC60 provide:
  - protection of persons against electric shock by direct contact ( $\leq 30$  mA),
  - protection of persons against electric shock by indirect contact ( $\geq 300$  mA),
  - protection of installations against the risk of fire (300 mA).

The Asi type provides increased immunity from electrical interference and polluted or corrosive environments.

## Asi type

The Asi type provides increased immunity from electrical interference and polluted or corrosive environments.

EN 61009

When a Vigi C120 device is combined with a C120 circuit breaker, it provides the following functions:

- protection of persons against electric shock by direct contact (30 mA),
- protection of persons against electric shock by indirect contact ( $\geq 300$  mA),
- protection of installations against fire hazards (300 mA to 1000 mA).

## EN 61009

When a Vigi C120 device is combined with a C120 circuit breaker, it provides the following functions:

- protection of persons against electric shock by direct contact (30 mA),
- protection of persons against electric shock by indirect contact ( $\geq 300$  mA),
- protection of installations against fire hazards (300 mA to 1000 mA).

### Special feature of type A "si"

They are appropriate for operating in environments with:

- high risk of nuisance tripping: frequent lightning strikes, IT system, presence of electronic ballasts, frequency converters, presence of switchgear incorporating lighting type interference filters, computer system, etc.
- blind sources:
  - presence of harmonics or high frequency rejections
  - presence of DC components: diodes, diode bridges, switch-mode power supplies, etc.
- protected against nuisance tripping caused by transient voltage surges (lightning strike, operation of switchgear on the network, etc.)

### Special feature of type A "SiE"

They are appropriate for operation in a humid atmosphere and/or an atmosphere polluted by aggressive agents: swimming pools, marinas, agro-food industry, water treatment plants, etc.

## Asi type

The Asi type provides increased immunity from electrical interference and polluted or corrosive environments.

IEC/EN 61008-1

- The iID K residual current circuit breakers provide:
  - protection of persons against electric shock by direct contact (30 mA),
  - protection of persons against electric shock by indirect contact (300 mA)
  - protection of installations against the risk of fire (300 mA).

## Catalogue numbers

iID K residual current circuit breakers				
Type	AC		Width in 9-mm modules	
Product	iID K			
Auxiliaries	Without auxiliaries			
2P	Sensitivity	30 mA	300 mA	
	Rating	25 A	40 A	4
		A9R50225	A9R75225	
Voltage rating (Ue)	2P	230 - 240 V		
Operating frequency	50/60 Hz			

## Connection

Type	Tightening torque	Without accessory	
		Copper cables Rigid	Flexible or ferrule
iID K	3.5 N.m	1 to 35 mm <sup>2</sup>	1 to 25 mm <sup>2</sup>

Clip on DIN rail 35 mm.

Indifferent position of installation.

## Technical data

Main characteristics		
According to IEC/EN 61008-1		
Insulation voltage (U <sub>i</sub> )		440 V
Pollution degree		2
Rated impulse withstand voltage (U <sub>imp</sub> )		4 kV
Making and breaking capacity (I <sub>m</sub> /I <sub>Dm</sub> )	25 to 40 A	500 A
	63 A	630 A
Surge current withstand (8/20 μs) without tripping		Up to 200 A
Conditional rated short circuit current (I <sub>nc</sub> /I <sub>Dc</sub> )	With iC60N/H/L, iK60N	6000 A
	With fuse	4500 A
Additional characteristics		
Degree of protection	Device in modular enclosure	IP40
Endurance (O-C)	Electrical	2000 cycles (AC1)
	Mechanical	5000 cycles
Operating temperature		-5°C to +60°C
Storage temperature		-40°C to +85°C

# RCCB-ID 125 A residual current circuit breaker (AC, A, Asi types)

IEC/EN 61008-1, VDE 0664

- The RCCB-ID 125 A residual current circuit breakers provide:
  - protection of persons against electric shock by direct contact (30 mA),
  - protection of persons against electric shock by indirect contact ( $\geq 100$  mA),
  - protection of installations against the risk of fire (300 mA or 500 mA).

The Asi type provides increased immunity from electrical interference and polluted or corrosive environments.

### OFsp auxiliary

- Electrical indication: by OFsp auxiliary mounted to the left, it has a double changeover switch indicating the "open" or "closed" position of the RCCB-ID 125 A.

### Accessories

- 2P and 4P sealable screw shield.

16766

16940

16939

- The RCCB-ID 125 A residual current circuit breakers provide:
  - protection of persons against electric shock by direct contact (30 mA),
  - protection of persons against electric shock by indirect contact ( $\geq 300$  mA),
  - protection of installations against the risk of fire (300 mA or 500 mA).

### B type

The RCCB-ID B type residual current circuit breakers provide:

- protection in the event of a continuous fault current on three-phase networks generated by:
  - controllers and variable speed drives,
  - battery chargers and inverters,
  - backed-up power supplies.

■ They include and also guarantee protection against fault currents:

- sinusoidal AC residual currents (AC type),
- pulsed DC residual currents (A type).

They can be adapted to all the application cases defined in standards IEC 60364 and EN 50178.

■ Schneider Electric guarantees that the type B RCCB-ID works correctly in combination with the variable speed drives manufactured by Schneider Electric.

### OFsp auxiliary

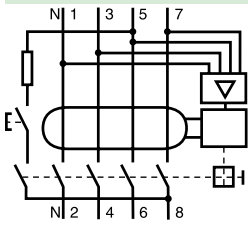

■ Electrical indication: by OFsp auxiliary mounted to the left.  
It has a double changeover switch indicating the "open" or "closed" position of the RCCB-ID B type .

### Accessories

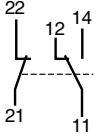

- 4P sealable screw shield.

# PRF1 12.5r/PRF1 Master/ PRD1 25r/PRD1 Master Type 1 and 2 LV surge arresters

The Type 1 range of surge arresters meets the normative withstand capability of current wave type 10/350 as (8/20 as for Type 2 surge arresters).

It is suitable for use with TT, TN-S, TN-C and 230 V IT earthing connection systems (neutral point connection).

In addition, the PRF1 Master surge arrester covers the 400 V IT system.

PRF1 12.5r and PRD1 surge arresters are fitted with a remote transfer contact to send «end-of-life indication» information.

PRD1 surge arresters are fitted with easy-to-replace withdrawable cartridges.

## PRF1 12.5r/PRF1 Master/PRD1 25r/PRD1 Master

The Type 1 surge arrester is recommended for electrical installations in the service sector and industrial buildings protected by a lightning conductor or by a meshed cage.

It protects electrical installations against direct lightning strikes.

It is used to conduct the direct lightning current, propagating from the earth conductor to the network conductors.

It must be installed with an upstream disconnection device, such as a fuse or circuit-breaker, whose breaking capacity must be at least equal to the maximum prospective short-circuit current at the installation point.

PRF1 12.5r and PRD1 25r surge arresters also provide Type 2 protection and protect the electrical installation by finely clipping the lightning wave overvoltages.

The iPF multi-pole single-piece surge arrester range is adapted for earthing systems: TT, TN-S, TN-C.

Type 2 surge arresters are tested with a 8/20  $\mu$ s current wave.

Type 3 surge arresters are tested with a 12/50  $\mu$ s and 8/20  $\mu$ s combined wave.

Each surge arrester in the range has a specific application:

■ **incoming protection (type 2):**

- the iPF65(r) is recommended for a very high risk level (strongly exposed site)
- the iPF40(r) is recommended for a high risk level
- the iPF20 is recommended for a medium risk level

■ **secondary protection (type 2 or 3):**

- the iPF8 ensures secondary protection of loads to be protected and is placed in cascade with the incoming surge arresters. This surge arrester is required when the loads to be protected are at a distance of more than 30 m from the incoming surge arrester.

The iPF surge arresters with “r” indication have remote transfer of the information: “surge arrester to be replaced”.

### Technical data

Main characteristics	
Operating frequency	50/60 Hz
Operating voltage (Ue)	230/400 V AC
Permanent operating current (Ic)	< 1 mA
Response time	< 25 ns
End of life indication:	Green
by green/red mechanical indicator	Red
End of life remote indication	By contact NO, NC 250 V / 0.25 A
Additional characteristics	
Operating temperature	-25°C to +60°C
Type of connection terminals	Tunnel terminals, 2.5 to 35 mm <sup>2</sup>
Standards	IEC 61643-1 <span style="border: 1px solid black; padding: 0 2px;">T2</span> and EN 61643-11 Type 2

# Electrical auxiliaries for iC60, iID, iSW-NA, RCA and ARA

■ The electrical auxiliaries are combined with iC60 circuit breakers, iID residual current circuit breakers, remote tripping switch disconnectors iSW-NA, RCA remote controls and ARA automatic reclosers; they enable tripping or remote indication of their position (open/closed/tripped) upon a fault.

■ They are fastened by clips (without tools) to the left side of the breaker.

■ The iOF/SD+OF auxiliary is a 2-in-1 product: via a mechanical selector switch, it provides two contacts, OF+SD or OF+OF.

## IEC/EN 60947-1

■ Tripping auxiliaries:

- iMN: undervoltage release
- iMNs: delayed undervoltage release
- iMNx: undervoltage release, independent from supply voltage
- iMSU: overvoltage release
- iMX: shunt release
- iMX+OF: shunt release with open/close contact.

## IEC/EN 60947-5-1

■ Indication auxiliaries:

- iOF: open/close contact
- iSD: fault indicating contact
- iOF/SD+OF: open/close contact and switchable OF or SD contact.

DB123545

## Combination table

Electrical auxiliaries			Remote control	Devices	
Indication auxiliaries			ARA automatic recloser or RCA remote control	iC60/iID/iSW-NA* Vigi	
Position					
Left	Right	Max quantity			
1 iOF/SD+OF	+ 1 iOF/SD+OF	+ 1 (iMX or iMN or iMSU)	-	 <b>iC60</b>	 <b>Vigi iC60</b>
Or 1 iOF	+ 1 (iSD or iOF or iOF/SD+OF)	+ 2 (iMX or iMN or iMSU)			
Or None	+ None	+ 3x iMSU			
None	+ 1 (iSD or iOF or iOF/SD+OF)	+ 1 (iMX or iMN or iMSU)		 <b>iID/iSW-NA*</b>	-
Or 1 iOF	+ 1 (iSD or iOF or iOF/SD+OF)	+ None	 <b>ARA</b>	 <b>iC60</b>	 <b>Vigi iC60</b>
None	+ 1 (iSD or iOF or iOF/SD+OF)	+ 1 (iMX or iMN or iMSU)		 <b>iID/iSW-NA*</b>	-
Or 1 iOF	+ 1 (iSD or iOF or iOF/SD+OF)	+ None	 <b>RCA</b>	 <b>iC60</b>	 <b>Vigi iC60</b>

Other possible associations: see technical pages

Tripping devices must be mounted first.

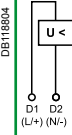

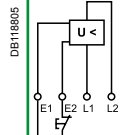

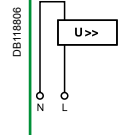

\*iSW-NA: the iSD auxiliary contact must be associated with an auxiliary (iMN, iMX, iMX+OF); it indicates that the remote tripping switch disconnecter has been tripped open.

<b>Vigi C120</b>	■ 4 markers max. per device	

- The electrical auxiliaries provide the remote tripping or position (open/closed/tripped) indication functions of these devices in the event of a fault.
- They clip on (no tool required) to the left-hand side of the associated device.
- The OF+SD/OF auxiliary is a two-in-one product: a mechanical selector switch is used to select one of two contacts: OF+SD or OF+OF.

**⚠** The electrical auxiliaries are not compatible with ID residual current circuit breakers of type B.

### IEC/EN 60947-1

- Tripping auxiliaries:
  - MN: undervoltage release
  - MNs: delayed undervoltage release
  - MNx: undervoltage release, independent of the supply voltage
  - MSU: voltage threshold release
  - MX: shunt release
  - MX+OF: shunt release with open/closed contact.

### IEC/EN 60947-5-1

- Indication auxiliaries:
  - OF: open/closed contact
  - OF.S: open/closed contact for RCCB/ID
  - SD: fault indicating contact
  - OF+SD/OF: choice of open/closed contact and OF or SD contact via the selector switch.

EN 61095, IEC 1095

**iCT contactors are available in two versions:**

- Contactors without manually-operated
- Contactors with manually-operated.

The breadth of the iCT contactor range satisfies most application cases.  
iCT contactors can be combined with auxiliary control, protection and indication functions.

## Contactors

**iCT 2P**  
PB106115-35

*manual control*

**iCT 4P**  
PB106105-35

- iCT contactors can be used to remote control applications in alternative networks:
  - lighting, heating, ventilation, roller blinds, sanitary hot water
  - mechanical ventilation systems, etc
  - load-shedding of non-priority circuits

PB106120-34

**Indication iACTs**

- This auxiliary allows indication or control of the "open" or "closed" position of the contactor power contacts

PB106124-34

**Interference filtering iACTp**

- This auxiliary is an interference suppressor which limits overvoltages on the control circuit

PB106123-34

**Dual control iACTc**

- Used to control a contactor in impulse-type mode or to combine latched or impulse-type control orders

PB106126-34

**Time delay iATEt**

- This auxiliary is used to time delay for iCT and iTL. According to cabling, there are 5 possible time delay types:
  - 1 for iTL
  - 4 for iCT

**Function type A: late closing**  
Delay energizing of contactor

**Function type B: time delay**

- Energize the contactor by closing a push button
- The time delay starts as soon as the control contacts are closed

**Function type C: late opening**

- Energize the contactor by closing a push button
- The time delay starts when the control contacts are opened

**Function type H: fixed time operation**

- Operate the contactor for a pre-determined time from the moment of energizing

## Contactors

## Contactors auxiliaries

		Choice of 50 Hz contactors					
Type		Contactor					
Rating	A	16	20	25	40	63	100
<b>Auxiliaries</b>							
iACTs indication auxiliary		Yes	Yes	Yes			
iACTp protection auxiliary	By yellow clips	No	No	Yes			
iACTc, iATEt control auxiliary	By yellow clips	No	No	Yes			

PB10611E-39

**Yellow clip**

- A simple clip-on system for flexible auxiliaries combination and improved robustness
- For electrical and mechanical connections

**Insulated terminals IP20**

**Minimum noise**

**Mechanical contact position indicator**

**Manually-operated contactors have a 4-position selector switch on their front face:**

- automatic operating mode
- temporary "ON" override
- permanent "ON" override: used to lock the contactor in the ON position during installation maintenance
- shutdown

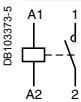

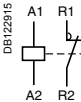

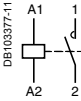

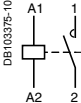

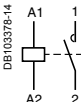

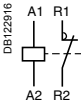

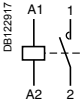

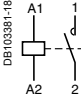

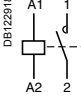

**Consistent with the entire Acti9 offer and with all types of lighting**

**Large circuit labeling area**

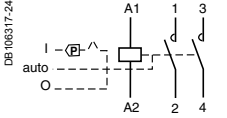

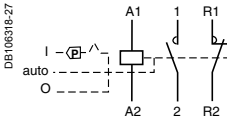

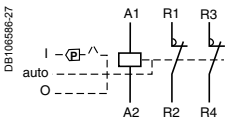

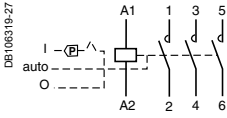

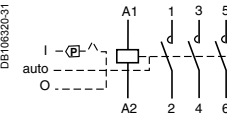

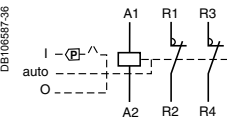

**ICT**

## Technical data

Power circuit		
Voltage rating (Ue)	1P, 2P	250 V AC
	3P, 4P	400 V AC
Frequency	50 Hz or 60 Hz	
Type of load	See module CA908026	
Endurance (O-C)		
Electrical	100,000 cycles	
Maximum number of switching operation a day	100	
Additional characteristics		
Insulation voltage (Ui)	500 V AC	
Pollution degree	2	
Rated impulse withstand voltage (Uimp)	2.5 kV (4 kV for 12/24/48 V AC)	
Degree of protection (IEC 60529)	Device only	IP20
	Device in modular enclosure	IP40
Operating temperature	-5°C to +60°C <sup>(1)</sup>	
Storage temperature	-40°C to +70°C	
Tropicalization (IEC 60068-1)	Treatment 2 (relative humidity 95 % at 55°C)	
ELSV compliance (Extra Low Safety Voltage) for 12/24/48 V AC versions		
The product control conforms to the SELV (safety extra low voltage) requirements		

(1) In the case of contactor mounting in a enclosure for which the interior temperature is in range between 50°C and 60°C, it is necessary to use a spacer, cat. no. A9A27062, between each contactor

IEC/EN 60669-2-2  
iTLs: IEC/EN 60947-5-1

## Impulse relays

**iTL**

- The impulse relays are used to control, by means of pushbuttons, lighting circuits consisting of:
  - incandescent lamps, low-voltage halogen lamps, etc. (resistive loads)
  - fluorescent lamps, discharge lamps, etc. (inductive loads)

## Remote indication

**iTLs**

- Allows remote indication of its operating state (open/closed)

**Indication iATLs**

- Allows remote indication of the associated impulse relay

## Centralised control

**iTLc**

- Allows centralised control of a group of TLc impulse relays, whilst at the same time retaining local impulse-type control

**Centralised control iATLc**

- Used for centralised control, thanks to a "pilot line", of a group of impulse relays controlling separate circuit, while at the same time maintaining local individual control of each impulse relay

## Latched control

**iTLm**

- Operated by latched orders from a changeover contact (switch, time switch, thermostat). Manual control does not work

**Latched control iATLm**

- Controls the associated impulse relay by latched orders from a changeover contact

## Impulse relays

## Impulse relays are used:

- Closing of the impulse relay pole(s) is triggered by an impulse on the coil.
- Having two stable mechanical positions, the pole(s) will be opened by the next impulse. Each impulse received by the coil reverses the position of the pole(s).
- Can be controlled by an unlimited number of pushbuttons.
- Zero energy consumption.

PB106131-34

### Changeover contact iTLi

- This impulse relay has a changeover contact

PB106134-34

### Extensions iETL

- Used to increase the number of impulse relay poles
- Can be installed on the iTL, iTLi, iTLc, iTLm and iTLs

PB106140-34

### Centralised control + indication iATLc+s

- Used for centralised control, thanks to a "pilot line", of a group of impulse relays controlling separate circuit, while at the same time maintaining local individual control of each impulse relay
- Remote indication of the mechanical status of each relay

PB106136-34

### Multi-level centralised control iATLc+c

- Allows centralised control of a group of iTLc or "iTL + ATLc" impulse relays

PB106125-34

### Time delay iATEt

- Combined with an impulse relay, it automatically disconnects the circuit after a preset time

PB106141-34

### Control iATLz

- Must be used when installing several illuminated PBs in parallel to control an impulse relay (prevents operating malfunctions)

PB106142-63

### Step by step control iATL4

- Allows step-by-step control of two circuits via a single pushbutton

## Mounting accessories

10	Yellow clips	A9C15415
11	9 mm spacer	A9A27062
12	Clip-on terminal markers	see module CA907001

DB 123631

## Auxiliaries

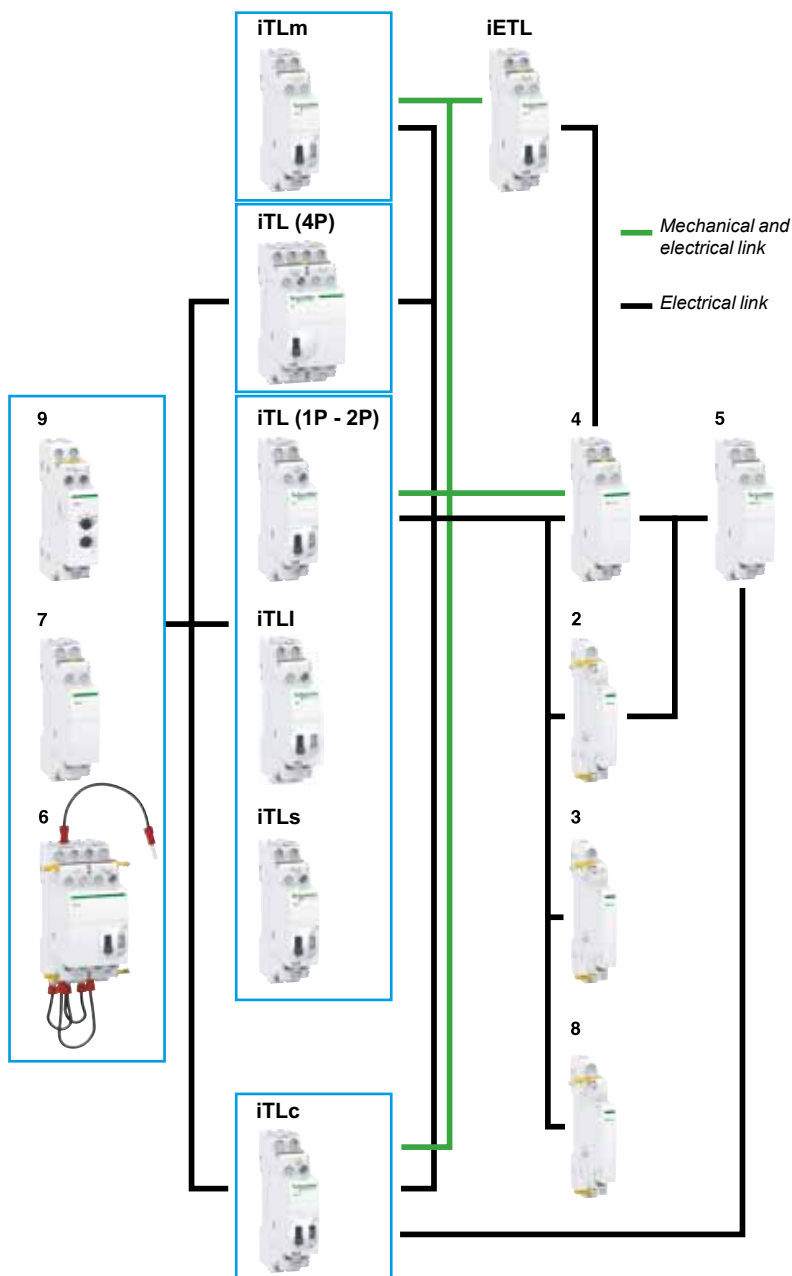

Centralised control			
2	iATLc <sup>(1), (3)</sup>	24...240 V AC	A9C15404
Indication			
3	iATLs <sup>(1)</sup>	24...240 V AC	A9C15405
Centralised control + indication			
4	iATLc+s <sup>(3)</sup>	24...240 V AC	A9C15409
Multi-level centralised control			
5	iATLc+c <sup>(2), (3)</sup>	24...240 V AC	A9C15410
Step by step control			
6	iATL4	230 V AC	A9C15412
Control by illuminated push-buttons			
7	iATLz	130...240 V AC	A9C15413
Latched control			
8	iATLm <sup>(1)</sup>	12...240 V AC	A9C15414
Time delay control			
9	iATEt <sup>(4)</sup>	24...240 V AC	A9C15419

(1) The iATLc, iATLs and iATLm 9 mm auxiliaries are used by themselves to the right of an impulse relay.

(2) Connection by traditional cabling. The iATLc+c must be mounted to the right of an iATLc+s or an iATLc.

(3) The centralised control functions (iTLc, iATLc, iATLc+s, iATLc+c) only operate on AC voltage networks.

(4) iATEt: control voltage: 24...240 V AC, 24...110 V DC.

PB106126-41

**Yellow clip**  
 ■ A simple clip-on system for flexible auxiliaries combination and improved robustness  
 ■ For electrical and mechanical connections

■ Insulated terminals IP20

■ Large circuit labeling area

■ Built-in or optional auxiliary function: state indication, centralised control, latched control, control for illuminated pushbutton, step-by-step control, time delay

■ Consistent with the entire Acti9 offer and with all types of lighting

■ Disconnection of remote control by selector switch (except for 4P single-piece iTL) for maintenance operation

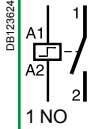

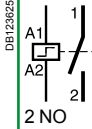

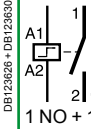

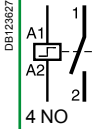

■ Manual controls on front face: direct and priority manual control by O-I toggle  
 ■ Mechanical contact position indicator

### Position contact indication

- Suitable for industrial isolation according to IEC/EN 60947-3 standard.
- The presence of the green strip guarantees physical opening of the contacts and allows operations to be performed on the downstream circuit in complete safety.

### iSW control switches (20, 32 A)

#### IEC/EN 60669-1, iSW switch with indicator light. IEC/EN 60669-2-4, iSW switch without indicator light.

These switches are used for:

- Control (opening and closing of circuits under load).
- The 1P and 2P switches are available with or without indicator light.
- Disconnection, for switches without indicator light IEC/EN 60669-2-4.

### iSW switch-disconnectors (40 to 125 A)

#### IEC 60947-3

The switch-disconnectors combine the following functions:

- Control (opening and closing of circuits under load).

#### OF iSW auxiliary

- Mounted on the left, it indicates the "open" or "closed" position of the switch and has a normally open (NO) or normally closed (NC) contact.

#### Accessory

- The padlocking facility locks the switch in the "open" or "closed" position.

The RCA remote control system allows:

- Remote electrical control (opening and closing) of circuit breakers with or without Vigi add-on RCD, with or without auxiliary.
- Circuit-breaker resetting after tripping, in accordance with safety principles and the regulations in force.
- Local control by operating handle.
- Circuit placing in safety configuration by padlocking.

2 choices of operation after tripping:

- A: Enabling of remote circuit-breaker resetting;
- B: Inhibition of remote resetting.

The version with Ti24 interface allows:

- Direct interfacing of remote control with a programmable logic controller (PLC), a supervision system and any other communication device, having inputs/outputs in 24 V DC (control, OF and SD indications).
- Remote indication by "OF" potential-free contact.
- Provision of 2 operating modes, "1 and 3".

The iMDU auxiliary allows RCA control in 24/48 V AC/DC.

# ARA automatic reclosers

For iC60 circuit breakers  
and iID residual current circuit breakers

The ARA reclosing auxiliary can:

- Perform automatic reclosing of the associated protection device, after tripping.
- Increase the availability of installations without supervision, isolated, hard of access and demanding very great availability (mobile telephony systems, motorways, pumping stations, airports, railways, meteorological stations, service stations, automatic teller machines, public lighting, tunnels, etc.), by restoring them to operation without intervention by personnel in the event of a transient fault (atmospheric disturbances, industrial overvoltages, etc.).
- The operator can choose predefined reclosing program which allows the safety and availability of facilities to be reconciled taking into account the facility's environment.
- The circuit is placed in safety configuration by the padlocking device.

# ARA automatic reclosers (cont.)

For iC60 circuit breakers

and iID residual current circuit breakers

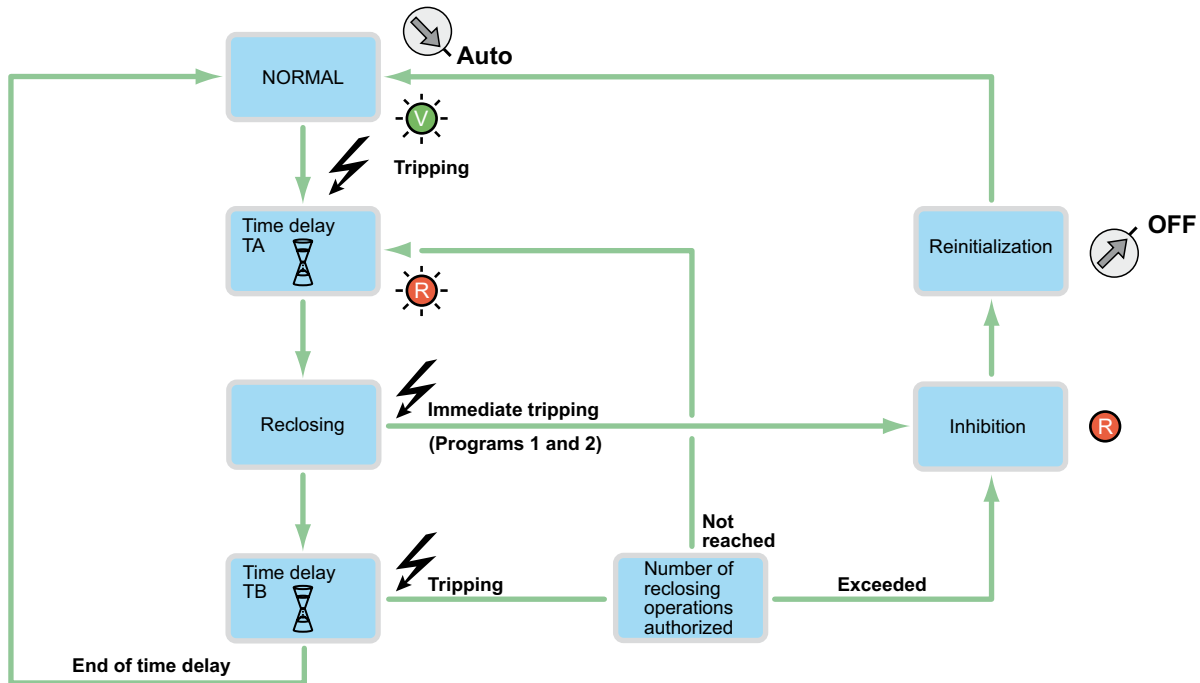

## Operating principle

The ARA automatic recloser makes a number of attempts at reclosing depending on the program chosen by the user.

The program includes the following settings:

- A time delay before reclosing (TA).
- A reinitialization time delay (TB).
- A maximum number of reclosing attempts.

If, following these attempts, the fault is still present, the device places itself in waiting for manual reclosing, or final remote reclosing (Y2).

				Number of reclosing attempts	Delay before reclosing	Check time	Final reclosing Y2

## Technical data

Control circuit		
Supply voltage (Ue) (N/P)		230 V AC, 50 Hz
Control voltage (Uc)	Type 1 inputs (Y1/Y2)	230 V AC (as per IEC 61131-2)
Min. duration of control order (Y2)		≥ 200 ms
Response time (Y2)		< 500ms
Consumption		≤ 1 W
Thermal self-protection with automatic Reset against overheating of the control circuit due to an abnormal number of operations		
Endurance (O-C) (ARA combined with a circuit breaker)		
Electrical		5000 cycles
Indication / Remote control		
Potential-free changeover contact output (OF/Locked)	Min.	24 V AC/DC, 10 mA
	Max.	230 V AC, 1 A
Input (Y1/Y2)	230 V AC	5 mA
Additional characteristics		
Degree of protection (IEC 60529)	Device only	IP20
	Device in a modular enclosure	IP40 Insulation class II
Insulation voltage (Ui)		400 V
Degree of pollution (IEC 60947)		3
Rated impulse withstand voltage (Uimp)		6 kV
Operating temperature		-25°C to +60°C
Storage temperature		-40°C to +70°C
Tropicalization		Treatment 2 (relative humidity of 93 % at +40°C)

# ARA automatic reclosers (cont.)

For iC60 circuit breakers

and iLD residual current circuit breakers

## Weight (g)

Automatic reclosers	
Type	ARA
For 1P, 1P+N, 2P circuit breakers or iLD 2P residual current circuit breaker	440
For 3P, 4P circuit breakers or iLD 4P residual current circuit breaker	470

## Dimensions (mm)

## IEC/EN 60947-2

The Reflex iC60 devices are integrated control circuit breakers which combine the following main functions in a single device:

- Remote control by latched and/or impulse-type order according to the 3 operating modes to be chosen by the user.
- Circuit breaker, to provide:
  - circuit protection against short-circuit currents,
  - circuit protection against overload currents,
  - disconnection in the industrial sector.

Resetting after a fault is performed manually, by the resetting handle.

The version with Ti24 allows direct interfacing of the Reflex iC60 with a PLC, to:

- Execute remote control (Y3).
- Indicate the state of the control circuit (OF) or circuit-breaker tripping (SD).

The iMDU auxiliary allows the Reflex iC60 to be controlled in 24/48 V AC/DC.

(1) Information to be supplied by the country concerned.

PB105880\_W\_70

■ Longer product service life thanks to:

- good overvoltage withstand capacity: products designed to provide a high industrial performance level (degree of pollution, rated impulse withstand voltage and insulation voltage),
- high limitation performances (see limitation curves),
- fast closure independent of the speed of resetting of the operating handle.

<b>Y2</b>	Control by impulse-type or latched order (depending on mode)
<b>N</b>	230 V AC power supply
<b>P</b>	
<b>OF</b>	Control circuit state indication contact
<b>SD</b>	Circuit-breaker tripping indication contact

DB123517

■ Operating state indicator lamp

■ Pushbutton for:  
□ "mode" selection  
□ opening/closing manual control

Remote control is possible by 3 operating modes to be set using the pushbutton on the front panel.

### Operating mode

DB123766

### Mode 1: locally or centrally controlled circuit-breaker opening/closing

- The orders come from various control points, and they are taken into account in their order of arrival
- Y1: latched order local control
- Y2: impulse-type local control
- Y3: latched order centralized control

### Mode 2: locally controlled opening/closing, centrally controlled opening

- The orders come from various control points.
- Only the stoppage orders are taken into account by the inputs Y1, Y3
- Y1: latched order local opening control
- Y2: impulse-type local opening/closing control
- Y3: latched order centralized opening control

### Mode 3: centrally controlled opening/closing + local override

- 3 positions allowing a choice between override and centralized control:
- Y1: latched order local control
- Y2: latched order local control
- Y3: latched order centralized control

## Comb busbars

### Accessories

### 1P+N and 3P+N comb busbar

043832

### Function

The comb busbars make it easier to install Schneider Electric products.

- Supplied with 2 side plates, IP 2
- Outgoing feeders can be marked
- Cutting markings on the copper bars and the insulating material
- Self-extinguishing insulating material, colour RAL 7016
- The teeth left on standby can be isolated by tooth cover end-pieces

### Wiring diagram

DB1105874

Comb busbars allow dismantability (1-2)

DB1105875

### Use

- Power supply via semi-rigid cable directly in the cage of the device:
  - cross section 16 mm<sup>2</sup> for DPN
  - cross section 10 mm<sup>2</sup> for STI

	1P+N	1P+N	3P+N

IEC/EN 60947-7-1.  
IEC/EN 61439-2.

## Description

- Distribloc 63 A is a four pole splitter block installable on a standard DIN rail.
- Outgoing feeders are connected at the front, without screws, in spring terminals. The contact pressure of the cable is independent of the operator.
- The spring contact pressure adapts automatically to the cross section of the conductor. It is independent of the operator.

## Advantages

- Very fast connection.
- Very simple phase rebalancing.
- In the event of an extension to or modification of the switchboard, connection is very easy.
- The appearance of its front panel (45 mm front tip) enables it to fit in on a row perfectly, alongside modular devices.

## Technical data

Main characteristics		
Cat. no	Distribution through the top	04040
	Distribution through the bottom	04041
According to IEC/EN 60947-7-1		
Degree of protection		IP20
Rated insulation voltage (Ui)		500 V AC
Voltage rating (Ue)		440 V AC
Rated impulse withstand voltage (Uimp)		6 kV
Short-circuit current withstand		Up to breaking capacity of Schneider Electric outgoing circuit breakers, even when reinforced by cascading implementation
Reference temperature		40°C
Rated current at 40°C (In)		63 A
Operating frequency		50/60 Hz
Width in 9-mm modules		8

PB104500-80

### Power supply

- Four-pole tunnel terminals with screw clamping.
- The tunnel terminals are located to facilitate the insertion of cables and clamping by screws.
- A single cable per connection point:
  - flexible from 4 to 16 mm<sup>2</sup>
  - rigid from 6 to 25 mm<sup>2</sup>.

### Installation

- Clip-on mounting on modular rail.
- Width occupied: 8x9-mm modules.

### Distribution

- 3 outgoing feeders connected by flexible or rigid cables of cross section 1 to 6 mm<sup>2</sup>.
- 2 rows of terminals:
  - 12 connection points for phases (L1, L2, L3)
  - 12 connection points for neutral.
- A single cable per connection point: flexible (without ferrule) or rigid from 1 to 6 mm<sup>2</sup>.
- Reliable, maintenance-free (tightness guaranteed over time).
- Insensitive to vibrations and thermal variations.

## Description

- Multiclip 80 A is a four-pole splitter block 24 modules wide installable on a standard DIN rail.
- Outgoing feeders are connected at the front, without screws, in spring terminals.
- The spring contact pressure adapts automatically to the cross section of the conductor. It is independent of the operator.
- Supplied with 12 black and 12 blue pre-stripped 6 mm<sup>2</sup> cables.

## Advantages

- Very fast connection.
- Very simple phase rebalancing.
- In the event of an extension to or modification of the switchboard, connection is very easy.
- Compatible with inter-rows of 150 mm.

## Dimensions (mm)

The following curves show the total fault current breaking time, depending on its amperage. For example: based on the curve on page 3, an iC60 circuit breaker of curve C, 20 A rating, will interrupt a current of 100 A (5 times the rated current  $I_n$ ) in:

- 2 seconds at least
- 7 seconds at most.

The circuit breakers' tripping curves consist of two parts:

- tripping of overload protection (thermal tripping device): the higher the current, the shorter the tripping time
- tripping of short-circuit protection (magnetic tripping device): if the current exceeds the threshold of this protection device, the breaking time is less than 10 milliseconds. For short-circuit currents exceeding 20 times the rated current, the time-current curves do not give a sufficiently precise representation. The breaking of high short-circuit currents is characterized by the current limiting curves, in peak current and in energy. The total breaking time can be estimated at 5 times the value of the ratio  $(I^2t)/(\hat{I})^2$ .

## Verification of the discrimination between two circuit breakers

By superimposing the curve of a circuit breaker on that of the circuit breaker installed upstream, one can check whether this combination will be discriminating in cases of overload (discrimination for all current values, up to the magnetic threshold of the upstream circuit breaker). This verification is useful when one of the two circuit breakers has adjustable thresholds; for fixed-threshold devices, this information is provided directly by the discrimination tables.

To check discrimination on short circuit, the energy characteristics of the two devices must be compared.

**iC60N/H/L ratings up to 4 A**

**Curve B**

**Curve C**

**Curve D**

Tripping times (min, max) at an ambient temperature of 30 °C (standards IEC/EN 60898).

**iC60N/H/L ratings 6 to 63 A**

**Curve B**

**Curve C**

**Curve D**

Tripping times (min, max) at an ambient temperature of 30 °C (standards IEC/ EN 60898).

Prospective current and real limit current.

## Definition

The limiting capacity of a circuit breaker is its ability to lessen the effects of a short circuit on an electrical installation by reducing the current amplitude and the dissipated power.

## Benefits of limiting

### Long installation service life

#### Thermal effects

Lower temperature rise at the conductor level, hence increased service life for cables and all components that are not self-protected (e.g. switches, contactors, etc.)

#### Mechanical effects

Lower electrodynamic repulsion forces, hence less risk of deformation or breakage of electrical contacts and busbars.

#### Electromagnetic effects

Less interference on sensitive equipment located in the vicinity of an electric circuit.

### Savings through cascading

Cascading is a technique derived directly from current limiting: downstream of a current-limiting circuit breaker it is possible to use circuit breakers of breaking capacity lower than the prospective short-circuit current (in line with the cascading tables on page XXXX). The breaking capacity is heightened thanks to current limiting by the upstream device. Substantial savings can be achieved in this way on switchgear and enclosures.

### Discrimination of protection devices

The circuit breakers' current limiting capacity improves discrimination with the protection devices located upstream: this is because the required energy passing through the upstream protection device is greatly reduced and can be not enough to cause it to trip. Discrimination can thus be natural without having to install a time-delayed protection device upstream.

### Acti9 circuit breaker current limiting

Profiting from Schneider Electric's experience and expertise in the field of short-circuit current breaking, the circuit breakers of the Acti9 range have a top-level current limiting characteristic for modular devices.

This assures them of optimal protection of the entire power distribution system.

### Compact NSX circuit breaker current limiting

#### Ics = 100 % Icu

The exceptional current limiting capacity of Compact NSX circuit breakers greatly attenuates the stresses caused by the fault current in the device.

The result is a significant increase in breaking performance.

In particular, the service breaking capacity Ics reaches 100% of Icu.

This performance, defined by the IEC 947-2 standard, is guaranteed following tests which involve:

- cutting off a fault current equal to 100% of Icu three times in a row
- then checking that the device operates normally:
  - it conducts its rated current without abnormal temperature rise;
  - the protection device operates within the limits authorized by the standard;
  - the suitability for isolation is ensured.

## Representation: Current limiting curves

The current limiting capacity of a circuit breaker is reflected by 2 curves which give, as a function of the prospective short-circuit current (current which would flow in the absence of a protection device):

- the real peak current (limited)
- the thermal stress (in A<sup>2</sup>s), this value, multiplied by the resistance of any element through which the short-circuit current passes, gives the power dissipated by this element.

The straight line "10 ms" representing the energy A<sup>2</sup>s of a prospective short-circuit current of a half-period (10 ms) indicates the energy that would be dissipated by the short-circuit current in the absence of limiting by the protection device (see example 2).

### Example 1

What is the peak value of a prospective short-circuit current of 150 kA rms (i.e. 330 kA) limited by an NSX250L device upstream?

➤ The peak value of the prospective short-circuit current is: 150 kA x √2 : 210 kA.

➤ As shown in the graph on page XXX, the Compact NSX250L circuit breaker reduces this value to: 30 kA.

### Example 2

What is the energy limited by an iC60N 25 A circuit breaker for a prospective short-circuit current of 10 kA rms. What is the quality of current limiting?

➤ as shown in the graph opposite:

- this short-circuit current (10 kA rms) is likely to dissipate up to 1,000 kA<sup>2</sup>s
- the iC60N circuit breaker reduces this thermal stress to: 45 kA<sup>2</sup>s, which is 22 times less.

## Example of use: Stresses acceptable by the cables

The following table shows the thermal stresses acceptable by the cables depending on their insulation, their composition (Cu or Al) and their cross section. Cross-section values are expressed in mm<sup>2</sup> and stresses in A<sup>2</sup>s.

S (mm <sup>2</sup> )		1.5	2.5	4	6	10
PVC	Cu	2.97 10 <sup>4</sup>	8.26 10 <sup>4</sup>	2.12 10 <sup>5</sup>	4.76 10 <sup>5</sup>	1.32 10 <sup>6</sup>
	Al					5.41 10 <sup>5</sup>
PRC	Cu	4.10 10 <sup>4</sup>	1.39 10 <sup>5</sup>	2.92 10 <sup>5</sup>	6.56 10 <sup>5</sup>	1.82 10 <sup>6</sup>
	Al					7.52 10 <sup>5</sup>
S (mm <sup>2</sup> )		16	25	35	50	
PVC	Cu	3.4 10 <sup>6</sup>	8.26 10 <sup>6</sup>	1.62 10 <sup>7</sup>	3.21 10 <sup>7</sup>	
	Al	1.39 10 <sup>6</sup>	3.38 10 <sup>6</sup>	6.64 10 <sup>6</sup>	1.35 10 <sup>7</sup>	
PRC	Cu	4.69 10 <sup>6</sup>	1.39 10 <sup>7</sup>	2.23 10 <sup>7</sup>	4.56 10 <sup>7</sup>	
	Al	1.93 10 <sup>6</sup>	4.70 10 <sup>6</sup>	9.23 10 <sup>6</sup>	1.88 10 <sup>7</sup>	

### Example

Is a Cu/PVC cable of cross section 10 mm<sup>2</sup> protected by a Compact NSX160F device?

The above table shows that the acceptable stress is 1.32 x 10<sup>6</sup> A<sup>2</sup>s. Any short-circuit current at the point where a Compact NSX160F device (I<sub>cu</sub> = 36 kA) is installed will be limited, with a thermal stress of less than 6 x 10<sup>5</sup> A<sup>2</sup>s. (Curve on page XX).

The cable is therefore always protected up to the breaking capacity of the circuit breaker.

# Auxiliary indicating contacts for Acti9 protective devices (cont.)

## Function

### RESET (SD contact)

When the main device is tripped and the fault has been eliminated, it is possible to switch the SD contact manually, via the "RESET" button on the front panel. The unit is then in "device opened manually" configuration.

	iOF	iSD	iOF/SD+OF
	-	■	■ iSD only

### TEST (SD or OF contact)

When the main device is opened or tripped, the TEST button can be used to check the satisfactory operation of the indicating circuit by simulating operation of the main device. This operation also modifies the position of the indicator on the front panel of the iSD auxiliary.

On the double contact (iOF/SD+OF), this function can be implemented only for the SD indicating circuit.

	iOF	iSD	iOF/SD+OF
	■	■	■

### iOF/SD+OF double contact

Change of function of the second contact from OF to SD.

	OF	OF

### "Low-level" indication

For the control of low-level circuits (inputs of PLCs, sensors/actuators, etc.), the RBN relay can transmit the signals delivered by the circuit breakers' auxiliary contacts.

### RBN relay

Type	Voltage (Ue)	Current rating (Ie)
Inputs (A1, A2)	230 V AC, 50...60 Hz	-
Outputs (11 and 12, 11 and 14)	5...250 V AC	5 mA...2 A
	5...48 V DC	

# Auxiliary trip units for Acti9 protective devices

## iMN, iMNs: undervoltage release units

### Function

- Tripping of the associated protective device, when the voltage across its terminals falls:
  - either by opening the control circuit (e.g. push-button),
  - or by lowering the supply voltage.
- Resetting of the protective device is possible only after the voltage across the terminals of the auxiliary has returned to its nominal value.
- The MNs undervoltage release does not perform tripping in the event of a voltage drop lasting less than 200 ms.
- A locking push-button control allows the circuit protected by the circuit breaker (e.g. machine control) to be placed in safety configuration.

### Technical data

Multiclip	Maximum operating current	-25°C	+60°C

Note: the temperature considered is the temperature viewed through the device.

## iK60, iC60 circuit breakers

### Températures élevées

- A rise in temperature causes lowering of the thermal threshold (tripping on overload).
- Protection is still ensured: the tripping threshold remains lower than the current acceptable by the cable ( $I_z$ )
- To prevent nuisance tripping, it should be checked that this threshold remains higher than the maximum operating current ( $I_B$ ) of the circuit, defined by:
  - the rated load currents,
  - the coefficients of expansion and simultaneity of use.
- The curve below indicates the minimum value of the threshold, relative to the rated current  $I_n$ , as a function of the temperature in the vicinity of the circuit breaker.

### Example for a three-phase circuit having the following characteristics:

- Cable (acceptable current  $I_z$  68 A), protected by an iC60 circuit breaker of rating 63 A
  - Maximum current that can be demanded by the loads ( $I_B$ ): 60 A.
- This current represents 0.95 times the rating of the circuit breaker: based on the curve opposite, there is no risk of nuisance tripping so long as the temperature does not exceed +65°C.

If the temperature is sufficiently high for the tripping threshold to become lower than the operating current  $I_B$ , switchboard ventilation should be provided for.

# Influence of ambient temperature (cont.)

## Low temperatures

- A fall in temperature increases the thermal tripping threshold of the circuit breaker.
- There is no risk of nuisance tripping: the threshold remains higher than the maximum operating current of the circuit ( $I_B$ ) demanded by the loads.
- It should be checked that the cable remains suitably protected, i.e. that its acceptable current ( $I_2$ ) is higher than the values shown in the following table (in amperes):

Circuit breaker rating (A)	Ambient temperature						
	-35°C	-25°C	-15°C	-5°C	+5°C	+15°C	+25°C
0.5 A	0.62	0.60	0.58	0.57	0.55	0.53	0.51
1 A	1.3	1.2	1.2	1.1	1.1	1.1	1.0
2 A	2.6	2.5	2.4	2.3	2.2	2.1	2.0
3 A	3.9	3.8	3.6	3.5	3.4	3.2	3.1
4 A	5.1	5.0	4.9	4.7	4.5	4.3	4.1
6 A	7.8	7.5	7.2	7.0	6.7	6.4	6.1
10 A	13	12	12	11	11	11	10
16 A	19	19	18	18	17	17	16
20 A	25	24	23	22	22	21	20
25 A	30	29	28	28	27	26	25
32 A	39	38	37	36	35	34	33
40 A	49	48	47	46	44	42	41
50 A	61	60	58	57	55	53	51
63 A	78	76	74	72	70	67	64

- When the ambient temperature could vary within a broad range, both these aspects must be taken into account:
  - the difference between the maximum operating current of the circuit ( $I_B$ ) and the tripping threshold of the circuit breaker for the minimum ambient temperature,
  - the difference between the strength of the cable ( $I_2$ ) and the maximum tripping threshold of the circuit breaker for the maximum ambient temperature.

## iID residual current circuit breakers

- For iID residual current circuit breakers, an ambient temperature higher than 40°C slightly reduces the acceptable main current.
- Up to 60°C, in all cases, the iID residual current circuit breakers are satisfactorily protected against overloads by an iC60 circuit breaker of the same rating, operating under the same ambient temperature.

## iCT contactors

In the case of contactor mounting in an enclosure for which the interior temperature is in a range between 50°C and 60°C, it is necessary to use a spacer, cat. no. A9A27062, between each contactor.

## Splitter blocks

In the event of a temperature higher than 40°C, the maximum acceptable current is limited to the values in the table below:

Type	Temperature				
	40°C	45°C	50°C	55°C	60°C
Multiclip 80 A	80	76	73	69	66
Distribloc 63 A	63	60	58	55	53

# Resistance to environmental conditions

Acti9 devices have successfully passed the environmental resistance tests specified in the building standards (IEC / EN 60898 and 60947-2 for circuit breakers, IEC / EN 61008 for residual current circuit breakers, etc.). Most of these tests were performed under the control of official bodies in different countries: the devices therefore carry the quality mark issued by each of these bodies.

Schneider Electric has also subjected these devices to additional tests with higher requirements, to give users reliability and sturdiness that are unparalleled on the market.

These tests checked that the Constraints described below did not have any significant effect on the main functions of the devices:

- Tripping (for protection devices).
- Isolation and dielectric withstand.
- Degree of protection (IP) of the casing.
- Grip on the mounting bracket (rail).
- Manual opening / closing.

Additional checks were performed for certain tests, mentioned in the tables below.

Constraints Type	Atmospheric				
	Humidity	Salt mist	Corrosive atmospheres		Dust
<b>Standard defining the test protocol</b>	IEC 60068-2-78	IEC 60068.2.52	IEC 60721-3-3

# Temperature derating

## Dissipated power and voltage drop for C120

### Temperature derating IEC 60947-5 / GB 14048-2

The current used for the circuit breakers varies according to the ambient temperature where the circuit breaker is located.

If the circuit breaker is installed in an enclosure or in a hot place (boiler room, etc.), the current required to trip the circuit breaker in the event of an overload will be reduced. If the ambient temperature exceeds the reference temperature of the circuit breaker, the circuit breaker will then be "derated". That is why circuit breaker manufacturers provide tables indicating the derated current (A) to be applied for given temperatures.

From examples taken from these tables, it should be noted that if the ambient temperature is less than the rated temperature, the circuit breaker is "overrated".

When several circuit breakers operating simultaneously are mounted side by side in a small enclosure, a temperature rise in the enclosure results in a reduction in the operating current.

In principle, this mutual temperature rise requires the application of an additional derating coefficient of 0.8.

The reference temperature is in a halftone colour.

Rating	Type	-25 °C	-20 °C	-15 °C	-10 °C	-5 °C	0 °C	5 °C	10 °C	15 °C	20 °C	25 °C	30 °C	35 °C	40 °C	45 °C	50 °C	55 °C	60 °C

### Dissipated power and voltage drop IEC 60947-5 / GB 14048-2

What is the dissipated power per pole?

The following table shows the dissipated power of the device in Watts for each rating, per pole, at In:

Rating (A)	20	30	40	50	60	80
C120 (W/pole)	2.8	3.4	3.5	3.6	4	4.5

What is the voltage drop per pole?

The following table shows the voltage drop of the device in mV for each rating, per pole, at In:

Rating (A)	20	30	40	50	60	80
C120 (mV/pole)	140	107	88	72	65	57

## Thermal stress curve C

Ue: 240 V ~ 1P  
Ue: 415 V ~ 2, 3P

Ue: 240 V ~ 2, 3P

Ue: 440 V ~ 2, 3P

# Short-circuit current limitation for C120

Peak current - 1P: 20 A - 2P: 30-40 A - 3P: 50-60 A - 4P: 80 A

## Tripping curves IEC 60947-5 / GB 14048-2

The operating range of the magnetic trip unit is included for:

- curve B: between 3.2 I<sub>n</sub> and 4.8 I<sub>n</sub>
- curve C: between 7 I<sub>n</sub> and 10 I<sub>n</sub>
- curve D: between 10 I<sub>n</sub> and 14 I<sub>n</sub>.

The curves show:

- the cold thermal tripping limits (25 °C), charged poles
- the electromagnetic tripping limits, 2 charged poles

### C120

Curve B

Curve C

Curve D

## Use of contactors from 16 to 100 A

For automation needs in the housing, tertiary and industrial sectors, the range of modular CT contactors is used for:

- Power control of final circuits for housing and the tertiary sector:
  - lighting (luminous signs, shop windows, safety lighting, etc.)
  - heating, heat pumps, ovens
  - hot water for domestic use
  - small utility motors (pumps, fans, barriers, garage doors, etc.)
  - emergency stops and safety systems
  - air conditioning
- Energy distribution control:
  - load shedding and restoration
  - source changeover, etc.

## Characterisation on load types

■ Standard IEC 61095 applies to electromechanical contactors for domestic and similar purposes. It differs from standard IEC 60947.4 (designed for industrial applications) by specific requirements relating to safety of persons and equipment in premises and corridors accessible to the general public.

Applications	Industrial: IEC 60947.4	Domestic: IEC 61095
Motor	AC3	AC7b
Heating	AC1	AC7a
Lighting	AC5a and b	AC5a and b

## Use for temperatures between 50°C and 60°C

When contactors are mounted in enclosures with an internal temperature of between 50°C and 60°C, a spacer, catalogue number A9A27062, must be placed between each contactor.
