Series	UZ series Miniature Buzzer
Mounting Hole Size	ø16
Type	UZ6
Shape	 Buzzer Unit  Cyclical Sound Adapter (for pulsing sound)
Unit	Buzzer unit Continuous sound
Bezel Size	
Bezel Color	Black (buzzer unit: blue)
Rated Voltage	12/24V DC Cyclical sound adapter 12/24V DC
Sound Pressure and Frequency	75 dB (at 1m) at rated voltage, 3.5 kHz ±800 Hz
Sound Cycle	Adjustable between 30 to 600 cycles per minute (period 0.1 to 2 sec)
Degree of Protection	IP40 (Buzzer unit)
Terminal Style	Solder terminal (cyclical sound adapter screw terminal M8)
Notes	<ul style="list-style-type: none"> •Same size and same terminal arrangement as AP6M series miniature pilot lights. •The intermittent sound adapter can be snapped on to the back of the buzzer unit.

ø8·10·12·16 AP series Miniature Pilot Lights

Super Bright LEDs with built-in current-limiting resistor and reverse polarity protection diode

- Space saving miniature style.
- Illumination colors: amber, blue, green, pure white, red, white, and yellow (blue and pure white available for AP8M and AP1M only)
- Marking is available on flat lens units. (except AP8M series)
- Built-in protection diode ensures a reverse withstand voltage of 100V.

- See website for details on approvals and standards.

Rated Current	Colors except Y	33mA	22mA	11mA	9mA (A, G, R, W), 7mA (PW, S)		
	Y only	9mA	11mA	11mA	7mA		
Illumination Color Code	A (amber), G (green), R (red), Y (yellow), W (white)			A (amber), G (green), PW (pure white), R (red), S (blue), Y (yellow), W (white)			
Operating Temperature	-20 to +55°C (no freezing)						
Storage Temperature	-30 to +55°C (no freezing)						
Operating Humidity	45 to 85% RH (no condensation)						
Insulation Resistance	Between live and dead parts: 100 MΩ minimum (500V DC megger)						
Dielectric Strength	Between live and dead parts: 1000V, 1 minute						
Reverse Withstand Voltage	100V (AP2M, AP6M), 200V (AP8M, AP1M)						
Solder Terminal	Soldering 350°C maximum (3 sec)						
Applicable Wire	ø1.0 or 0.75 mm ² maximum (20 to 16 AWG)						
Weight (approx.)	AP6M: 7.5g, AP2M: 4.5g, AP1M: 2.5g, AP8M: 2.0g						
Degree of Protection	AP6M, AP2M, AP1M: IP65 AP8M: IP40 (according to IEC 60529)						

AC Adapter/DC-DC Converter (Option)

Unit	AC Adapter	DC-DC Converter
Applicable Unit	AP6M and AP2M (6V rating only)	
Rated Voltage	100/110V AC, 200/220V AC 50/60 Hz	110V DC
Voltage Range	100/110V AC±10% 200/220V AC±10%	90 to 140V
Power Consumption	1.6 VA maximum	1W maximum
Insulation Voltage	250V AC	140V DC
Insulation Resistance	Between live and dead parts: 100 MΩ minimum (500V DC megger)	
	Between live and dead parts: 2000V, 1 minute	
Dielectric Strength	Between I/O terminals: 2000V AC, 1 minute	
	Between I/O terminals: 1500V AC, 1 minute	
Terminal Style	M3 screw	
Weight (approx.)	38g	20g

Flasher Unit (Option)

Applicable Unit	AP6M (12V and 24V DC rating only)
Rated Voltage	12/24V DC compatible
Voltage Range	12/24V DC±10%
Flashing Period	Adjustable between approximately 30 to 600 cycles per minute (period 0.1 to 2 sec)
Current Draw	4 mA (OFF) to 6 mA (ON)
Terminal Style	M3 screw
Weight (approx.)	13.5g

Specify a lens color code in place of ② in the Ordering No.

Note 1: On the dome lens, use a white (W) lens for white (W) illumination.

Note 2: On the flat lens, use a clear (C) lens for white (W) illumination.

AP Series Miniature Pilot Lights

Safety Precautions

- Turn off power to the AP series pilot lights before installation, removal, wiring, maintenance, and inspection. Failure to turn power off may cause electrical shocks or fire hazard.
- For wiring, use wires of proper size to meet the voltage and current requirements. Improper wiring may cause overheating and

create a fire hazard. Tighten the M3 terminal screws to a torque of 0.6 to 1.0 N·m. Failure to tighten terminal screws may cause overheating and fire.

Instructions

Panel Mounting

When mounting the AP series pilot lights on a panel, use the optional locking ring wrench. Do not use pliers. Excessive tightening will damage the locking ring.

Unit	Tightening Torque
AP6M	0.88 N·m
AP2M	0.78 N·m
AP1M	0.29 N·m
AP8M	0.29 N·m

Installing the AC Adapter, DC-DC Converter, and Flasher Unit

1. Make sure that the voltage rating and terminal style of the AP series pilot lights are applicable to the AC adapter, DC-DC Converter, and flasher units.
2. Install the pilot light into a panel cut-out before mounting an AC adapter, DC-DC Converter, or flasher unit. Note that the pilot light cannot be installed in a panel cut-out with an AC adapter, DC-DC Converter, or flasher unit mounted.
3. When installing an AC adapter, DC-DC Converter, or flasher unit, make sure that the TOP marking is on the same side as the TOP marking of the pilot light. AC adapter, DC-DC Converter, and flasher unit are snapped on to the back of the pilot light.
4. To remove the AC adapter, DC-DC Converter, or flasher unit, insert the tip of the removal tool into the joint hook and pull towards you as shown in the photo below.

Wiring

1. Note the positive and negative polarities when wiring.
2. All DC type AP series pilot lights contain a diode for protection against reverse polarity and a current limiting resistor, eliminating the need for external resistors.
3. Solder the terminal at 350°C within 3 seconds using a 60W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the pilot light housing with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
Use a non-corrosive rosin flux.

DC-DC Converter

DC-DC converters employ an electronic oscillating circuit. Oscillating sounds may be heard depending on operating conditions, but will not affect performance characteristics.

Marking

AP6M, AP2M, and AP1M round flat lenses contain a white marking plate inside the lens. (AP8M lens cannot be removed.)

Flasher Unit

Pierce the round mark on the nameplate on top of the flasher unit with a flat screwdriver and adjust the variable resistor inside. Turn clockwise to lengthen the flashing period.

Note: Do not apply excessive force to terminals X1 and X2 during wiring.

Note: Do not apply excessive force to terminals X1 and X2 during wiring.

5. When using an AC adapter, DC-DC Converter, or flasher unit where the units are subjected to noise, connect a noise suppressor across terminals X1 and X2 as shown in the diagram below.

ø16 AP6S Series Miniature Pilot Lights

Miniature Pilot Lights with Super Bright LEDs

- IDEC's LSTD LED lamps with BA9S base
- Six illumination colors: amber, green, red, blue, white, and yellow
- Screw terminal and solder/tab terminal available
- Degree of protection: IP65
- The current-limiting resistor in the LED lamp eliminates the need for external resistors

Specifications

ø16 AP6S Series Miniature Pilot Lights

Transformer

Shape	Primary Voltage	Secondary Voltage	Part No.	Applicable Load
Din Rail Mount Transformer For 6V 	100/110V AC	5.5V AC, 1W	TWR516	LSTD-6 LED lamp (6V AC/DC) or LS-6 incandescent lamp (6V AC/DC, 1W)
	115/120V AC		TWR5126	
	200/220V AC		TWR526	
	230/240V AC		TWR5246	
	380V AC		TWR5386	
	400/440V AC		TWR546	
	480V AC		TWR5486	

Specifications

Operating Voltage	100/110V AC, 115/120V AC, 200/220V AC, 230/240V AC, 380V AC, 400/440V AC, 480V AC (50/60Hz)
Current Draw	2.4 VA
Rated Insulation Voltage	600V
Insulation Resistance	100 MΩ minimum (500V DC megger)
Operating Temperature	-30 to +60°C (no freezing)
Storage Temperature	-40 to +80°C (no freezing)
Operating Humidity	35 to 85% RH (no condensation)
Vibration Resistance	Damage Limits: 30 Hz, amplitude 1.5 mm Operating extremes: 5 to 55 Hz, amplitude 0.5 mm
Shock Resistance	Damage limits: 1,000 m/s ² Operating Extremes: 100 m/s ²
Dielectric Strength	2,500V AC, 1 minute
Terminal Screw	M3.5
Applicable Wire	2 mm ² maximum, 2 wires maximum
Weight (approx.)	87g

Safety Precautions

- Turn off power to the AP6S series units before installation, removal, wiring, maintenance, and inspection. Failure to turn power off may cause electrical shocks or fire hazard.
- For wiring, use wires of proper size to meet the voltage and current requirements. Improper soldering may cause overheating and create fire hazards.

Instructions

Replacing Lens and Marking Plate

Removal

Remove the operator (color lens, marking plate, and lens holder) by holding the color lens recesses with the Lens Removal Tool (MT-101) and pulling it out. Remove the marking plate by disengaging the latches between the color lens and lens holder. The marking plate must be engraved on the front side as shown below.

Installation

Place the marking plate on the lens holder in the correct direction and press the color lens onto the lens holder to engage the latches. Insert the lens holder into the housing in the correct direction.

Marking Plate and Engraving Area

Engraving must be made on the engraving area less than 0.5mm deep.

Lens	Round	Square	Rectangular
Built-in Marking Plate	<ul style="list-style-type: none"> • Engraving must be made on the engraving area within 0.5mm deep. • The marking plate is made of white acrylic resin. 		
Applicable Marking Film			
	<ul style="list-style-type: none"> *Thickness = 0.1 mm × 1 pc • Marking film is not supplied. • Recommended marking film: Polyester film 		

Notes on Mounting

Screw Terminal

- Because screw terminal types use hexagonal nuts, they cannot be mounted closely together. However, rectangular units can be mounted closely when installed horizontally.
- When removing the hexagonal nuts, loosen the terminal screws. The hexagonal nuts cannot be removed when the terminal screws are tightened.

- When mounting the pilot lights collectively, note the mounting order. Pilot lights mounted in between units cannot be removed.

Tab Terminal

The locking ring is plastic. To tighten the ring, use an optional locking ring wrench (MT-001). Do not use pliers. Do not tighten with excessive force, otherwise the locking ring will be damaged. Tightening torque should not exceed 0.88 N·m

Collective Mounting and Continuous Illumination

Collective mounting or continuous illumination of pilot lights may cause the ambient temperature to rise above the rated operating temperature. Make sure to provide efficient ventilation when the mounting panel is not metallic or when the pilot lights are mounted collectively.

Wiring

Solder the terminal at 350°C within 3 seconds using a 60W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the pilot light housing with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.

Power Supply for LED Lamps

The operating voltage of the LED lamp is within ±5% or ±10% of the rated voltage. Make sure that the power voltage is within this range.

ø6·7·8·9·10 UP series Miniature Pilot Lights

Available in Various Sizes

- Five illumination colors: amber, green, red, white, yellow
- Various sizes and design.
- Available with a built-in current limiting resistor.
- Degree of protection: IP65 (ø9 and ø10)
- Panel thickness 0.6 to 4 mm (built-in current limiting resistor type 0.6 to 6 mm)

Specifications

Without a Built-in Current Limiting Resistor

Color Code	A (amber), G (Green), R (Red), W (white), Y (yellow)
Rated Current	10 mA (Amber, Green, Red, Yellow) 15 mA (White)
Forward Current	20 mA maximum at 25°C
Reverse Voltage	3V maximum at 25°C
Power Consumption	60 mW maximum at 25°C
Operating Temperature	-20 to +55°C
Storage Temperature	-25 to +80°C
Forward Voltage	Maximum value: 3V Standard value: 2V (forward current: 10 mA)
Dielectric Strength	Between live and dead parts: 500V AC, 1 minute

- Approx. 30,000 hours (until the brightness reduces to 50% of the initial value when lit at complete direct current the rated voltage under 25°C environment.)

With a Built-in Current Limiting Resistor

Color Code	A (amber), G (Green), R (Red), W (white), Y (yellow)
Operating Voltage	12V DC±10%, 24V DC±10%
Rated Current	15 mA
Operating Temperature	-20 to +55°C (no freezing)
Storage Temperature	-25 to +80°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)
Dielectric Strength	Between live and dead parts: 500V AC, 1 minute

- Approx. 30,000 hours (until the brightness reduces to 50% of the initial value when lit at complete direct current the rated voltage under 25°C environment.)

Note: For UP series pilot lights without built-in current limiting resistors, connect an external resistor in series. Otherwise, the LED may be damaged.

ø6.7.8.9.10 UP Series Miniature Pilot Lights

Instructions

Polarity

Pay attention to the polarity of the power supply as UP series units do not contain a diode for protection against reverse polarity. On solder terminal units, the terminal with a white paint marking is positive. On wire-wrap terminal units, the long terminal is positive and the short terminal is negative.

Current Limiting Resistor

When using a UP series unit without a built-in current limiting resistor, connect an external current limiting resistor. Calculate the resistance using the following formula.

$$\text{Resistance (R)} = \frac{\text{Operating Voltage (V)} - 2}{\text{Rated Current (I)} *}$$

* Rated Current (I) = 10 mA, except white color at 15 mA

Note: Use a resistor of higher resistance than the calculated value (R).

$$\text{Rated Wattage of Resistor (W)} = \frac{\text{Rated Current (I)} \times \text{Operating Voltage (V)}}{2} \times 2 \text{ to } 3 *$$

* 2 to 3 is a safety factor

Reference Value of Current Limit Resistor

Color	Amber, Green, Red, Yellow	White
Operating Voltage		
5V DC	300Ω (1/4W)	200Ω (1/4W)
6V DC	390Ω (1/4W)	270Ω (1/4W)
12V DC	1000Ω (1/4W)	680Ω (1/4W)
24V DC	2200Ω (1/2W)	1500Ω (1/2W)

Waterproof Type

The degree of protection is distinguished by the color of the terminal.

Terminal (Plastic)	Degree of Protection
Black	IP40
Blue	IP65

Wiring

Solder the terminal at 350°C within 3 seconds using a 60W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the pilot light housing with the terminal. Do not bend the terminal or apply excessive force to the terminal.

Notes on Operating Voltage

The rated operating voltage represents a complete DC value. When using a pulsating voltage such as a full-wave rectification voltage, keep peak currents within the forward current I_f . Peak currents exceeding I_f may shorten the life of the LED lamp.

Panel Mounting

When mounting UP series units on to the panel, refer to the table below for the recommended tightening torque. Do not tighten with excessive force, otherwise the locking ring will be damaged.

Model	Recommended Tightening Torque
UP06	0.29 N·m
UP7	0.39 N·m
UP8	0.49 N·m
UP9	0.59 N·m
UP9P	0.29 N·m
UP1	0.59 N·m
UP1P	0.29 N·m

UP Series Miniature Pilot Lights (Single Board Mounting)

Single board mounting for miniature LEDs. Same length as H6, L6, and LW series control units

- Five illumination colors: amber, green, red, white, yellow

Specifications

Panel Cut-out

Internal Circuit

The longer pin is the positive terminal

UP Series Miniature Pilot Lights

Safety Precautions

• Turn off power to the unit before installation, removal, wiring, maintenance, and inspection. Failure to turn off may cause electrical shocks or fire hazard.

• For wiring, use wires of a proper size to meet the voltage and current requirements. Improper soldering or failure to tighten the terminal screw may cause overheating and fire.

Instructions

Single Board Mounting

UP series miniature pilot light single board mounting types can be mounted with H6, L6, LW series control units on the same panel. Follow the instructions below on single board mounting.

1. Mount the LED kit to the PC board.

• Temporary mounting
 1. Note the polarity of the terminals and insert the terminals to the PC board.
 2. Make sure that part A of the LED kit is pressed tightly to the PC board. Bend the terminals sideways as shown on the left.

2. Mount the operator and the UP series pilot lights on to the control panel.

3. Mount the contact block to the operator of the miniature control unit and lock the unit by turning the locking lever.

4. Install the PC board in 1. to the panel in 3.

5. Solder the terminals.

Before soldering, make sure that each terminal of the contact block is securely inserted into the PC board holes.

* When mounting H6, L6, LW, and UP series on a single board, make sure that the distance between the front of the panel and the mounting side of the PC board is 37.6 mm.

Polarity

Pay attention to the polarity of the power supply as UP series units do not contain a diode for protection against reverse polarity. The long terminal is positive and the short terminal is negative.

Current Limiting Resistor

When using a UP series unit without a built-in current limiting resistor, connect an external current limiting resistor. Calculate the resistance using the following formula.

$$\text{Resistance (R)} = \frac{\text{Operating Voltage (V)} - 2}{\text{Rated Current (I)} *}$$

* Rated Current (I) = 10 mA, except white color at 15 mA

Note: Use a resistor of higher resistance than the calculated value (R).

$$\text{Rated Wattage of Resistor (W)} = \text{Rated Current (I)} \times \text{Operating Voltage (V)} \times 2 \text{ to } 3 *$$

* 2 to 3 is a safety factor

Color	Amber, Green, Yellow, Amber	White
Operating Voltage		
5V DC	300Ω (1/4W)	200Ω (1/4W)
6V DC	390Ω (1/4W)	270Ω (1/4W)
12V DC	1000Ω (1/4W)	680Ω (1/4W)
24V DC	2200Ω (1/2W)	1500Ω (1/2W)

Wiring

Solder the terminal at 350°C within 3 seconds using a 60W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the pilot light housing with the terminal. Do not bend the terminal or apply excessive force to the terminal.

Notes on Panel Mounting

Use an optional locking ring wrench to mount the unit onto a panel. Tightening torque should not exceed 0.5 N·m. Do not use pliers. Do not tighten with excessive force, otherwise the locking ring will be damaged.

PC Board and Circuit Design

Use glass epoxy copper clad laminate, double-sided through-hole PC boards with a thickness of 1.6 mm.

Example of single board mounting

ø16 UZ6 series Miniature Buzzer

Miniature Electronic Buzzer for mounting in ø16 mm Mounting Hole

- Same size and terminal alignment as AP6M series miniature pilot lights.
- Sounds can be adjusted from approximately 30 to 600 cycles per minute using the optional sound adapter.
- The sound adapter can be snapped on to the rear part of the buzzer unit.

Specifications

Buzzer Unit

Insulation Voltage	60V DC
Rated Voltage	12V DC, 24V DC
Voltage Range	12V DC $\pm 10\%$, 24V DC $\pm 10\%$
Current Draw	24 mA
Sound Pressure (at 0.1m)	Steady sound: 75dB (at the rated voltage)
Sound Frequency	3.5 kHz $\pm 800\text{Hz}$
Operating Temperature	-20 to +50°C (no freezing)
Storage Temperature	-25 to +80°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)
Insulation Resistance	100 M Ω minimum (500V DC megger)
Dielectric Strength	Between live and dead parts: 1,000V AC, 1 minute
Degree of Protection	IP40 (IEC 60529)
Terminal Style	Solder terminal
Applicable Wire	$\phi 1$ or 0.75 mm ² max.
Cap Color	Blue
Weight (approx.)	6.5g

Ratings / Cyclical Sound Adapter

Rated Voltage	12/24V DC
Voltage Range	12/24V DC $\pm 10\%$
Current Draw	30 mA (when installed on the buzzer unit)
Cyclical Sound	30 to 600 cycles per minute (period: 0.1 to 2 sec) ON/OFF time ratio 1:1
Applicable Buzzer Unit	12V DC, 24V DC buzzers (UZ6-11, UZ6-12)
Terminal Screw	M3
Applicable Wire	1.25 mm ² max.
Weight (approx.)	13.5g

Buzzer Unit (continuous sound)

Shape	Terminal Style	Operating Voltage	Part No.	Package Quantity
	Solder	12V DC $\pm 10\%$	UZ6-11	1
		24V DC $\pm 10\%$	UZ6-12	1

Cyclical Sound Adapter

Shape	Terminal Style	Operating Voltage	Part No.	Package Quantity
	Screw	12V/24V DC $\pm 10\%$	UZ6-F10	1

Accessories

Shape	Specification	Part No.	Remarks
	Nickel-plated brass	MT-001	Used to tighten the locking ring when installing a UZ6 buzzer onto a panel.
	Stainless steel	MT-100	Used to remove the cyclical sound adapter from the buzzer. The cyclical sound adapter can be removed by using the tip of the tool as shown in the left photo.
	For cyclical sound adapter	AP-VL3

Cyclical Sound Adapter

Panel Cut-out

Safety Precautions

• Turn off power to the buzzer before installation, removal, wiring, maintenance, and inspection. Failure to turn off may cause electrical shocks or fire hazard.

• For wiring, use wires of a proper size to meet the voltage and current requirements. Tighten the M3 screw terminal of the cyclical sound adapter to a torque of 0.6 to 1.0 N·m. Improper soldering or failure to tighten the terminal screw may cause overheating and fire.

Instructions

Notes on Panel Mounting

Use an optional locking ring wrench to mount the unit onto a panel. Tightening torque should not exceed 0.88 N·m. Do not use pliers. Do not tighten with excessive force, otherwise the locking ring will be damaged.

Power Supply Noise

When the buzzer is used where power noise might occur, use a noise suppressor element to prevent noise interference.

Cyclical Sound Adjustment

Pierce the round mark on the nameplate on top of the cyclical sound adapter with a flat screwdriver and adjust the variable resistor inside. Turn clockwise for longer cyclical sounds and counterclockwise for shorter cyclical sounds.

Notes on Installing the Cyclical Sound Adapter

1. The cyclical sound adapter can be used on 12V and 24V DC buzzer units (UZ6-11, UZ6-12).
2. Mount the buzzer unit on the panel before installing the cyclical sound adapter on the panel. The buzzer unit cannot be mounted with the cyclical sound adapter installed.
3. When installing the cyclical sound adapter, make sure that the TOP marking on the cyclical sound adapter is on the same side as the TOP marking on the buzzer unit and press in.

Wiring

Solder the terminal at 350°C within 3 seconds using a 60W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the buzzer unit housing with the terminal. Do not bend the terminal or apply excessive force to the terminal.
